Surgical and Dental Instruments

INTEGRA™
LIMIT UNCERTAINTY

INTRODUCTION

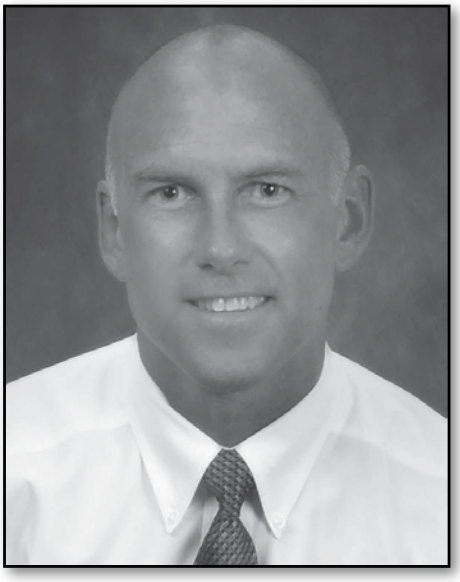
This new Animal Healthcare Products Catalog demonstrates the Miltex® commitment to this clinician and their special patient population. We have assembled a significant array of Instrumentation to meet both the General and Specialty Surgical needs of this unique and diverse marketplace.

In addition to the premium Miltex® and Padgett® brands, we also illustrate a number of instrument grade choices and single-use products. These provide both quality and value options to our customers.

This Miltex® resolve to support Animal Health is both for now as well as in future product and service development initiatives. We look forward to increased cooperation to achieve goals of mutual benefit.

Tolerances in product specifications, due to the hand craftsmanship of the instruments, are subject to minor variations in dimensions and finishes.

CONTRIBUTING CLINICIANS
(LISTED IN ALPHABETICAL ORDER)



Brett Beckman, DVM, DAVDC, DAAPM

Diplomate, American Academy of Pain Management

Diplomate, American Veterinary Dental College

Fellow, Academy of Veterinary Dentistry

President, American Veterinary Dental Society

Florida Veterinary Dentistry and Oral Surgery

Dr. Brett Beckman is a 1987 graduate of Mississippi State University and is acting President of the American Veterinary Dental Society. Dr. Beckman holds advanced degrees as a Fellow in the Academy of Veterinary Dentistry, a Diplomate in the American Veterinary Dental College and a Diplomate in the American Academy of Pain Management. He has published numerous peer-reviewed articles in the field of veterinary dentistry, oral surgery and pain management. Dr. Beckman was honored as Alumnus of the Year by the Mississippi State University College of Veterinary Medicine in 2007. He owns and operates a companion animal and referral dentistry and oral surgery practice in Punta Gorda, Florida and sees referral cases at Affiliated Veterinary Specialists in Orlando, Florida and Cherokee Emergency in Atlanta. He lectures internationally on topics related to dentistry and pain management and operates the Veterinary Dental Education Center in Punta Gorda, Florida, a teaching facility dedicated to advancing the educational needs of veterinarians and veterinary technicians around the world in the field of dentistry and oral surgery. Gary S. Goldstein, DVM, DAVDC

Diplomate, American Veterinary Dental College

Fellow, Academy of Veterinary Dentistry

Dr. Goldstein is an Associate Clinical Professor, Director of the Veterinary Dental Service and Associate Medical Director of the University of Minnesota Veterinary Medical Center.

He graduated from the University of Minnesota School of Veterinary Medicine in 1984. After graduation, he moved to Houston, Texas to study veterinary dentistry at the Houston Veterinary Dental Clinic under the direct supervision of Dr. Donald Ross. In 1988 he joined Gulf Coast Veterinary Specialists where his practice was limited to veterinary dentistry accepting referrals for the entire Gulf Coast region. In 1987 Dr. Goldstein became a Charter Fellow in the Academy of Veterinary Dentistry and in 1992 became Board Certified in Veterinary Dentistry.

He joined the faculty at the University of Minnesota College of Veterinary Medicine as an associate clinical professor in the veterinary clinical sciences department in April 2000. He teaches veterinary students in the classroom as well as in clinics and his staff see over 1500 cases per year.

Dr. Goldstein is a published author and lecturer, offers dental seminars throughout the country, has published numerous articles and has written several chapters in veterinary textbooks.

Barron P. Hall, DVM

Diplomate, American Veterinary Dental College

Fellow, Academy of Veterinary Dentistry

Dr. Barron P. Hall graduated from The Ohio State University College of Veterinary Medicine in 1993. After practicing veterinary medicine with a special interest in dentistry and oral surgery, he began a veterinary dental and oral surgical residency in Dallas, Texas under the guidance of Robert Wiggs, DVM, FAVD, Dipl., AVDC. Following his residency, he opened a veterinary dental practice in Northern Kentucky where he practiced for three years before accepting the opportunity to become a partner at the Animal Dental Clinic in 2006.

Dr. Hall is a Diplomate of the American Veterinary Dental College, of which there are only 105 in the world, and a Fellow of the Academy of Veterinary Dentistry. He continues his training by attending numerous professional meetings and hands-on laboratories. He has also given or assisted in more than 100 lectures and laboratory workshops for veterinarians, technicians, and pet owners both nationally and internationally on various topics in veterinary dentistry. He is a consultant for the Veterinary Information Network (VIN) and the veterinary dentist for the National Zoo in Washington, D.C.

Keith C. Hinshaw, DVM, MPVM,

Dr. Hinshaw is a 1980 graduate of the University of California at Davis, where he was senior class president and co-valedictorian. During veterinary school he selected the non-domestic animal track, which emphasized clinical experience in zoo, exotic pet, and laboratory animal medicine. During his last year of veterinary school, he also enrolled in the Master of Preventive Veterinary Medicine (MPVM) program at UCD, which he completed in 1981. The MPVM program provides advanced training in epidemiology, biostatistics, and medical data management to prepare veterinarians to investigate disease problems in animal populations.

After graduating from veterinary school, Dr. Hinshaw entered the Primate Medicine residency program at the California National Primate Research Center located on the edge of the UC Davis campus. In addition to providing medical care for the primates and other animals at the Center, he also gained more experience through rotations in the residency programs in UCD's Non-domestic Animal Medicine service and Laboratory Animal Medicine service. He completed the Primate Medicine residency in 1982 and was then hired as Director of Animal Health at the Philadelphia Zoo.

Since 1982, Dr. Hinshaw has overseen the animal health program at the Philadelphia Zoo. In addition to providing veterinary care for the Zoo's animal collection, he supervises the veterinary staff, which includes a second clinical veterinarian, 3 veterinary technicians, and a veterinary pathologist. The Philadelphia Zoo also offers a 2 year post-graduate training program in zoological medicine and surgery, as well as externship opportunities to fourth year veterinary students interested in zoo medicine. Dr. Hinshaw also has an adjunct appointment at the nearby University of Pennsylvania School of Veterinary Medicine, where he has provided lectures on zoological medicine.

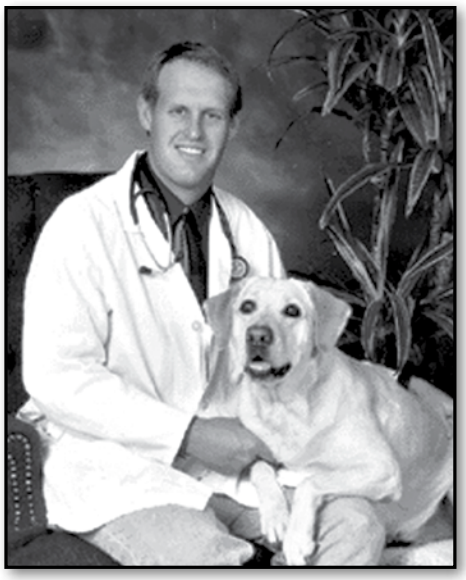
Steven E. Holmstrom, DVM, DAVDC

Diplomate, American Veterinary Dental College

Steven E. Holmstrom, DVM, Dipl. AVDC, currently practices at the Animal Dental Clinic in San Carlos, California, having been certified by the American Veterinary Dental College (AVDC) 1989. Dr. Holmstrom earned his DVM degree from the University of Missouri in 1972.

Dr. Holmstrom has consulted for the National Aeronautics and Space Administration Ames Research Center, University of California at Berkeley and Santa Cruz campuses, Moss Landing Marine Lab, Monterey Bay Aquarium and numerous pharmaceutical and dental companies. He is a Past President of the American Veterinary Dental College (AVDC), Academy of Veterinary Dentistry and American Veterinary Dental Society (AVDS). He is the current Treasurer of the AVDC. He has received awards including the AVDC Service Award, AVDS Education Award, AAHA Far West Practitioner of the Year and the University of Missouri College of Veterinary Medicine Alumnus of the Year. He has written numerous articles and publications, including a textbook on veterinary dental techniques, now in it's third edition, and published in Japanese, Spanish and Italian; a textbook for veterinary technicians and is the Guest Editor for two editions of Veterinary Clinics of North America. He speaks frequently on veterinary dentistry at major national and international meetings.

For recreation he is an underwater SCUBA Instructor, Ham radio operator, motorhome enthusiast, and avid Sailor. He is a past Commodore of the Sequoia Yacht Club in Redwood City. He also donates his time to the Rotary Club of San Carlos and Peter Emily International Veterinary Dental Foundation.



Brook Niemiec, DVM, DAVDC

Diplomate, American Veterinary Dental College

Fellow, Academy of Veterinary Dentistry

Dr. Brook Niemiec is a 1994 graduate of the University of California, Davis School of Veterinary Medicine, and a Board Certified specialist in Veterinary Dentistry as well as a Fellow in the Academy of Veterinary Dentistry.

As one of only 100 Board Certified Veterinary Dental specialists worldwide, Dr. Niemiec is recognized internationally as one of the leading authorities in Veterinary Dentistry.

Dr. Niemiec is the Chief of Staff of Southern California Veterinary Dental Specialties and has been serving the dental needs of animals (pets and zoo animals) for over a decade. During this time, he has performed over 30,000 dental procedures, including endodontic therapy (root canals and vital pulp therapy), oral and maxilliofacial surgery, periodontal therapy and surgery, orthodontics (braces), restorative and cosmetic dentistry, and prosthetic (crowns and bridges) dentistry.

As an innovator in veterinary dentistry, Dr. Niemiec has brought several advancements to the field. His contributions include: the introduction of ultrasonic debridement for surgical endodontic procedures, stainless steel carriers for veterinary patients, bridges, and implantology.

An advocate for improved understanding, prevention and treatment of disease, Dr. Niemiec enjoys teaching, and lectures extensively to professional and non-professional groups at local, national, and international meetings. Additionally, he has published numerous articles in veterinary medical journals at the local, state, national, and international levels.

In the continued interest of teaching, Dr. Niemiec is the cofounder of a veterinary dental radiology telemedicine and training website, www.vetdentalrad.com, and has also recently added an international training center in San Diego, CA. For information on classes, please visit www.vetdentaltraining.com.

In his spare time, Dr. Niemiec is an enthusiastic outdoorsman who enjoys hiking, fishing, skiing, camping and playing golf, as well as visiting museums, attending live theater, and sporting events. He also enjoys frequent trips to the beach with his Labrador Retriever, Caeli, and returns home to his black cat Nez. For more information on Dr. Niemiec, or veterinary dentistry, please visit his website www.dogbeachdentistry.com or call Southern California Veterinary Dental Specialties at (858) 279-2108.

Laura Putnam, DVM

Dr. Putnam graduated from the University of California, Davis School of Veterinary Medicine in 2005. After completion of a one year private practice internship at PetCare in Santa Rosa, California, she moved back to her hometown of Santa Barbara where she currently practices small animal medicine.

At work, Dr. Putnam has a special interest in emergency, soft tissue surgery and getting to know her clients. She lives with her husband, their two dogs and three cats. In her spare time she can be found exploring the foothills, mountains and beaches of Santa Barbara with her furry family.

Carpinteria Veterinary Hospital, California

Katherine E. Queck, DVM

Fellow, Academy of Veterinary Dentistry

Dr. Queck opened The Carolinas Animal Hospital and Dental Clinic in 1993. A graduate of Iowa State University, Dr. Queck has performed advanced dental procedures on pets for over 20 years. She is a Fellow of the Academy of Veterinary Dentistry of which there are less than 100 members worldwide. She has published scientific papers, conducts teaching laboratories, and provides continuing education seminars for veterinary staff. She firmly believes comprehensive dental care for pets helps them live longer and happier lives.

Sara L. Sharp, CVT VTS (Dentistry)

Secretary, Academy of Veterinary Dental Technicians

Sara Sharp is a Veterinary Technician Specialist in Dentistry and has been teaching in the Colorado area for the past 10 years and working in conjunction with Pfizer Animal Health. She is a credentialed veterinary technician who holds a specialty status in dentistry through the National Association of Veterinary Technicians in America/ CVTS approved Academy of Veterinary Dental Technicians. She has lectured and taught wet labs nationwide with AAHA, AVMA and the Annual Veterinary Dental Forum. Sara has published many articles in assorted journals. She has worked doing almost exclusively dentistry for the past 22 years in the Denver area.

Mark Sopko, ASVDT

Mark Sopko is an ASVDT Certified Veterinary Dental Technician and the owner of SOPKO VETERINARY DENTAL SERVICES, LLC. Understanding the need for veterinary dental training, Mark established his company in 2000 and consults for private practice veterinary clinics where his topics include proper dental techniques, instrumentation, client communication, and dental radiography. He has been working in the Veterinary Dental field since 1995.

Mark has worked as a curator and animal handler at a local zoo. He also worked as a wildlife rehabilitator for the state of New Jersey, and began his career in animal medicine as a veterinary technician where he discovered his passion for veterinary dentistry. Over the years Mark has conducted numerous educational training programs for Universities & Technical Programs, nature centers, veterinary conferences, and related organizations on various animal health topics.

Kevin Stepaniuk, DVM, DAVDC

Diplomate, American Veterinary Dental College
Fellow, Academy of Veterinary Dentistry
Pacific Veterinary Dental Services P.S.

Dr. Stepaniuk completed his undergraduate degree at the University of Calgary and his Doctor of Veterinary Medicine degree at Oklahoma State University. He completed a small animal medicine and surgery internship at Washington State University before entering into private practice. Dr. Stepaniuk practiced in a general and emergency veterinary medicine prior to focusing on veterinary dentistry and oral surgery. He is a Fellow of the Academy of Veterinary Dentistry and a Diplomate of the American Veterinary Dental College. Dr. Stepaniuk owns and operates a referral veterinary dentistry and oral surgery practice. Currently, he is a director for the American Veterinary Dental Society. He has internationally lectured and taught wet labs in veterinary dentistry and oral surgery.

Carol Weldin, RDH, BS

Carol Weldin, RDH, BS, is a Registered Dental Hygienist who has been involved in veterinary dentistry since 1981 working with one of the charter members of the American Veterinary Dental College on the design of specialty instruments and proper prophylaxis techniques for companion animals.

Carol was a reviewer of Veterinary Dental Techniques, 1st and 2nd editions, published by W.B. Saunders; also Veterinary Dentistry for the Technician & Office Staff, and has authored articles on veterinary dentistry to the dental hygiene community, along with designing specialty kits for veterinary dentistry instrumentation, most notably the Weldin Periodontal Instrument Kit. She has chaired periodontal instrumentation courses at the Annual Veterinary Dentistry Forum, is an officer of the American Veterinary Dental Society, a Trustee of the Foundation For Veterinary Dentistry, and is currently involved with the American Veterinary Dental Technicians as a member of the Advisory Committee, and has been appointed to the Organizing Committee for the Center for Animals in Society, University of California Davis School of Veterinary Medicine.

Carol has lectured nationally on Advances in Veterinary Dentistry, with particular emphasis on the use of high-frequency ultrasonic instrumentation, along with instrument selection, care and usage. She is currently involved in additional new product development for veterinary dentistry.

Carol is an affiliate member of the following two organizations: Association of Human-Animal Bond Veterinarians and the International Association of Assistance Dog Partners. In addition, she is a member of the American Association of University Women.

She and her dog Trevin, a career change Canine Companions for Independence dog, are a certified pet therapy team, visiting hospitals, a pediatric hospice home, participating in a Paws To Read Literacy Program and various outreach programs that aim to increase awareness of the importance of animal-assisted therapy and the human-animal bond. They have been featured in numerous newspaper articles and a television interview.

carol.weldin@comcast.net • 925-937-9515

Robert "Bob" Bruce Wiggs, DVM, DAVDC

Diplomate, American Veterinary Dental College

Adjunct Associate Professor at the Texas A&M University System's Baylor College of Dentistry, Dallas, Texas

Dr. Robert B. Wiggs graduated from Texas A & M Commerce in 1970 with a B.S in Agriculture and Education. In 1972 he completed his B.S in Veterinary Science at Texas A & M University College Station, and his D.V.M in 1973. He owns the Dallas Dental Service Animal Clinic, and is an Adjunct Professor at the Texas A&M University System's Baylor College of Dentistry. He is a member and Past President of the Dallas County Veterinary Medical Association and a member and Past President of the American Veterinary Dental Society. He is also Past President and Charter Fellow of the Academy of Veterinary Dentistry, Past President and Diplomate of the American Veterinary Dental College, Past President and member of the Veterinary Oversight Group, and President of the World Veterinary Dental Counsel. He is author of Veterinary Dentistry Principles and Practice published by Lippincott Raven, a co-author of The Veterinarian's Companion for Common Dental Procedures and written over thirty chapters for other books and a large number of articles on veterinary dentistry. Veterinary Dentistry Principles and Practice was described as "The Bible of Veterinary Dentistry" in its reviews upon publication. Dr. Wiggs received the American Veterinary Dental College's Peter Emily Award in 1994, Texas A&M University's Outstanding Alumnus – Companion Animal Medicine Award in 1995, The Texas Veterinary Medical Association's Companion Animal Practitioner of the Year Award 1996, the American Veterinary Dental Society's Research and Education Award in 1999, The Academy of Dentistry's Fellow of the Year Award 2001, the Hu-Friedy Golden Scaler Award 2001 and others. Dr. Wiggs was lectured both nationally and internationally for many years.

Matt Wilson, DVM

Dr. Matt Wilson is a 1998 graduate of The Ohio State University College of Veterinary Medicine. He is a partner and business manager of Animal Clinic Northview Inc., a 16 doctor practice in North Ridgeville, Ohio. He has limited his practice to veterinary dentistry since 2000. He is currently enrolled in the Alternate Pathway program of the American Veterinary Dental College.

ANATOMY OF MILTEX® SCISSORS

Miltex crafts high quality, surgical grade stainless steel scissors designed to provide exceptional performance in a variety of applications.

The careful construction of all Miltex® scissors permits their use for multiple procedures.

- Cutting and dissecting tissue
- Cutting suture, dressing, tubing and a variety of other materials

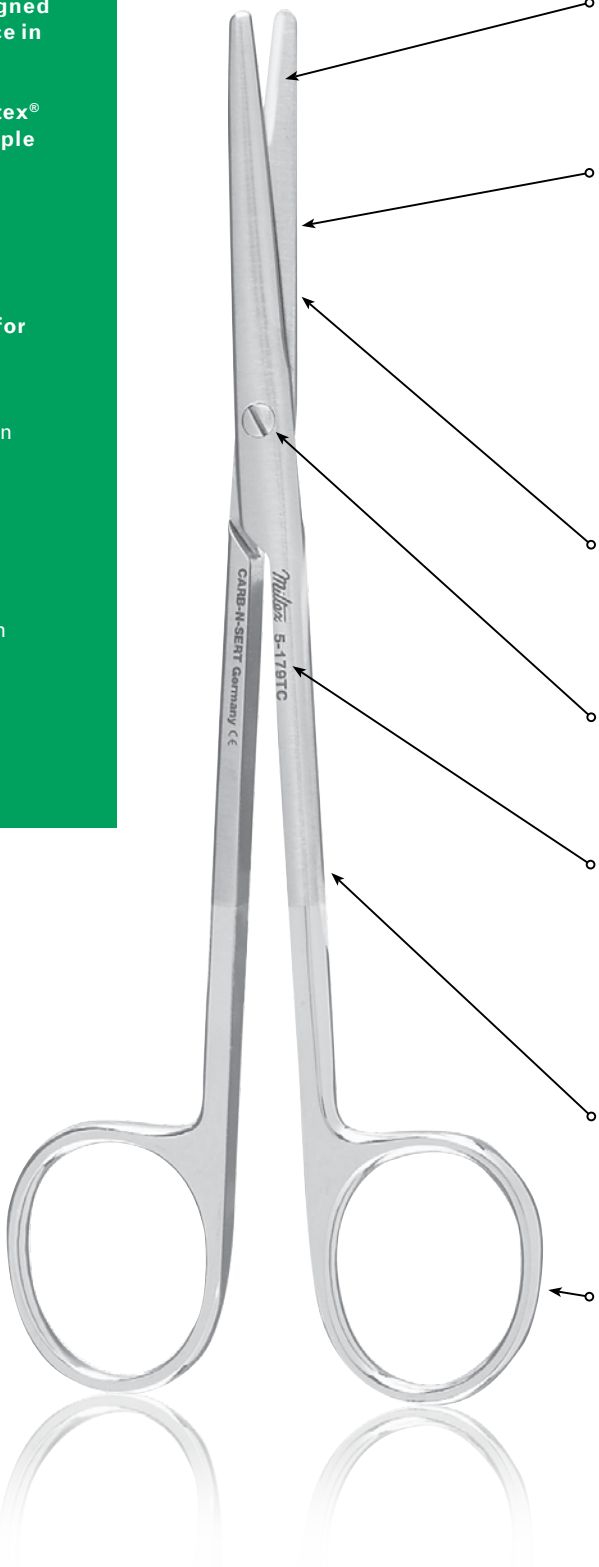
Always use the scissors designed for a particular task to achieve the desired outcome.

A precise cutting action depends upon

- Carefully honed blades
- A proper amount of "play" between blades
- A well-balanced instrument

Dissection (or probing) depends upon

- A smooth finish to the outer edge of the blades
- Properly rounded tips that meet fully when closed



CHOICE OF BLADES
Carb-N-Sert® (Tungsten Carbide)
SuperCut
SuperCut/Carb-N-Sert® combination
Stainless Steel

BLADE DESIGN
Tungsten carbide inserts are seamlessly bonded to the finest quality stainless steel surgical scissors then precisely ground and honed on diamond wheels.

SuperCut Scissors have a finely beveled blade with a razor-sharp edge and opposing blade with micro-fine serrations to prevent tissue slippage and to facilitate effortless cutting.

STRENGTH & HARDNESS
Manufactured to ensure greater Rockwell hardness for instrument durability and longer-lasting blade edge sharpness.

SCREW LOCK
Fully tempered precision screw locks maintain perfect alignment.

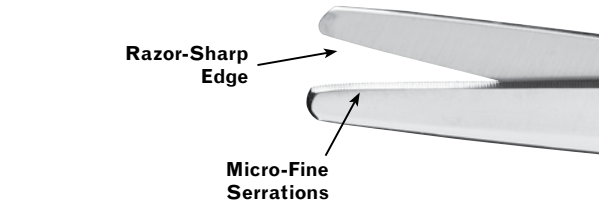
LASER ETCHING
All Miltex® Scissors are laser etched with our logo and catalog number for easy re-ordering. Advanced laser techniques no longer harm instruments the way traditional acid etching techniques did.

ERGONOMIC DESIGN
Outstanding instrument design combines weight, balance and feel for optimal comfort and performance.

RING HANDLES
Well rounded and polished for better feel and comfort as well as for prevention of hand fatigue. Gold and black finished handles differentiate tungsten carbide and SuperCut Scissors as precision instruments.

MILTEX® SUPERCUT SCISSORS

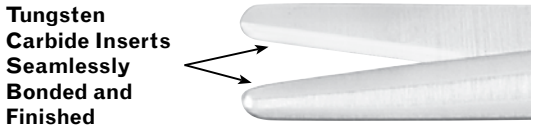
SuperCut Scissors have a specially designed razor-sharp upper blade edge that cuts effortlessly through tissue. The lower blade has micro-fine serrations to hold tissue and to prevent slippage. For easy identification, Miltex® SuperCut Scissors have black ring handles.



SuperCut Scissors are designed to cut tissue only. Dropping or mishandling the scissors will cause the razor-sharp edge to nick or to become irregular. Proper handling will ensure lifetime service. Resharpening at regular intervals is recommended and is a service that Miltex offers.

MILTEX® CARB-N-SERT® SCISSORS*

Carb-N-Sert® Scissors have tungsten carbide inserts seamlessly bonded to the upper and lower blades. These premium-grade scissors offer precision cutting performance as well as the durability of tungsten carbide cutting edges.

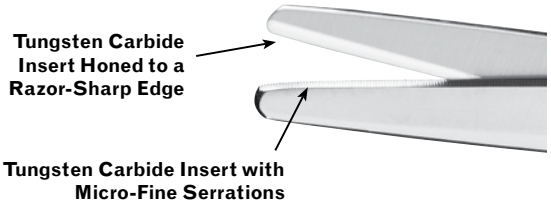


Carb-N-Sert® Scissors provide consistently superior performance and extended service life, resulting in considerable cost savings to the clinician.

Miltex® Carb-N-Sert® Scissors are easily identified by the gold ring handles.

SUPERCUT/CARB-N-SERT® SCISSORS*

The combination SuperCut/Carb-N-Sert® Scissors by Miltex offer precision SuperCut performance with one lower serrated blade and one upper razor-sharp blade combined with the durability of tungsten carbide cutting edges.



SuperCut/Carb-N-Sert® Scissors are easily identified with one short and one long gold-plated ring handle.

* Note: cold or chemical sterilization is not recommended for tungsten carbide instruments.

Operating Scissors

General utility scissors with sharp-blunt and blunt-blunt tips are ideal for cutting suture, gauze, tubing and other materials. The sharp-sharp patterns are also used for general utility applications but are preferred for cutting tendons and cartilage. **Note: SuperCut scissors are not recommended for use on suture, gauze or tubing.**

Miscellaneous General & Specialty Scissors

STRABISMUS Scissors
This pattern is a smaller and more delicate version of a "Baby Metzenbaum". Rounded tips are useful for small delicate surgical dissection.

GOLDMAN-FOX Scissors
A longer and slightly heavier version of the Tenotomy scissors; one-serrated blade for optimum tissue grip is ideal for wound debridement and other precise dissection of delicate tissue.

PLASTIC SURGERY Scissors
General purpose plastic surgery scissors are a longer and slightly heavier version of the "Iris Scissors".

RAGNELL Scissors
The blunt and flattened tip design is ideal for controlled undermining and precise tissue dissection.

GRADLE Scissors
This is a very popular pattern for dermatology and ophthalmology applications. The delicate "Tenotomy-like" tips are ideal for delicate dissection.

REF	Description	Tip	Type	Length
5-312TC	STRABISMUS Scissors	straight, blunt	Carb-N-Sert	4-1/2" (11.4 cm)
5-314TC	STRABISMUS Scissors	curved, blunt	Carb-N-Sert	4-1/2" (11.4 cm)

GORNEY Scissors

The Gorney and Gorney-Freeman scissors are a heavier pattern when compared to the Kaye and Kaye-Freeman scissors and are ideal for general surgery procedures. Combined with the flattened tip, the saber-back blades with semi-sharp outer edges allow for effortlessly passing through and undermining tissue. The flattened and delicate blunt tips facilitate precise dissection.

REF	Description	Tip	Type	Length

Specialty Scissors

SUTURE/WIRE CUTTING Scissors
45° angled blades with rounded tips and wire notched blade make these scissors useful for cutting all types of suture and 26 AWG or smaller wire.

CONVERSE (WILMER) Scissors
Angled blades make these scissors ideal for dissection and for use as a general utility scissors.

MILTEX® Blepharoplasty Scissors
The lower serrated blade with flat tapered tip facilitates precise undermining of delicate tissue and is ideal for general, dermal and various surgical applications.

FOMON Saber-Back Scissors
The saber-back blade with semi-sharp outer edges and flattened tip help cut, dissect and undermine tissue in a variety of applications.

FOMON Dorsal Scissors
45° angled shanks provide optimum visibility during procedures. The strong narrow serrated blade design cuts cartilage effortlessly.

PAR Scissors
A lighter and more delicate variation to the Strabismus and Baby Metzenbaum scissors. A great pattern for precise dissecting and for cutting of delicate tissue.

ANATOMY OF MILTEX® FORCEPS

CARB-N-SERT® (Tungsten Carbide Tips)
Carb-N-Sert® tips are made of tungsten carbide, the hardest steel made for surgical instruments.

Serrations are precision milled into the tungsten carbide material and form pyramid-shaped teeth to provide a positive non-slip grip. Tissue forceps feature precision formed teeth with perfect alignment to provide a durable and reliable grasp of the most delicate or toughest tissue, as well as needles, suture, dressing and delicate vessels.

SPRING TENSION
Proper tension maintains the desired distance between handles and provides a comfortable grasp without requiring unnecessary pressure to close the instrument.

LASER ETCHING
All Miltex forceps are laser etched with our logo and catalog number for easy re-ordering reference. Advanced laser techniques no longer harm instruments the way traditional acid etching techniques did.

SATIN FINISH
Each instrument is satin finished to reduce glare.

TANG
Evenly welded and finished with rounded edges for dissecting. Gold finished handles identify these forceps as precision instruments.

* *Note: cold or chemical sterilization is not recommended for tungsten carbide instruments*

Dressing & Tissue Forceps

Miltex® Forceps with tungsten carbide jaws provide considerably longer service life and will maintain a firm and reliable grasping surface.

Dressing & Tissue Forceps

Tissue Forceps are designed to hold tissue that is sometimes soft and irregular. These forceps are manufactured with miniature "teeth" that mesh, thereby trapping the tissue and producing a firm grip. This feature has earned these forceps the nickname of "mouse tooth" or "rat tooth."

Dressing Forceps, unlike tissue forceps, have gently serrated tips.

* **Fenestrated handles** are designed as lightweight forceps in order to reduce hand fatigue.

REF	Description	Type	Tip	Length
6-2	Dressing Forceps	standard pattern, serrated handles	serrated tips	4" (10.2 cm)

Splinter Forceps

Professional Splinter Removal Kit includes the Splinter Liberator used to approach the embedded fragment by elevating the epidermis.

After the fragment is exposed, the Walter Forceps are used for quick and easy removal of splinter.

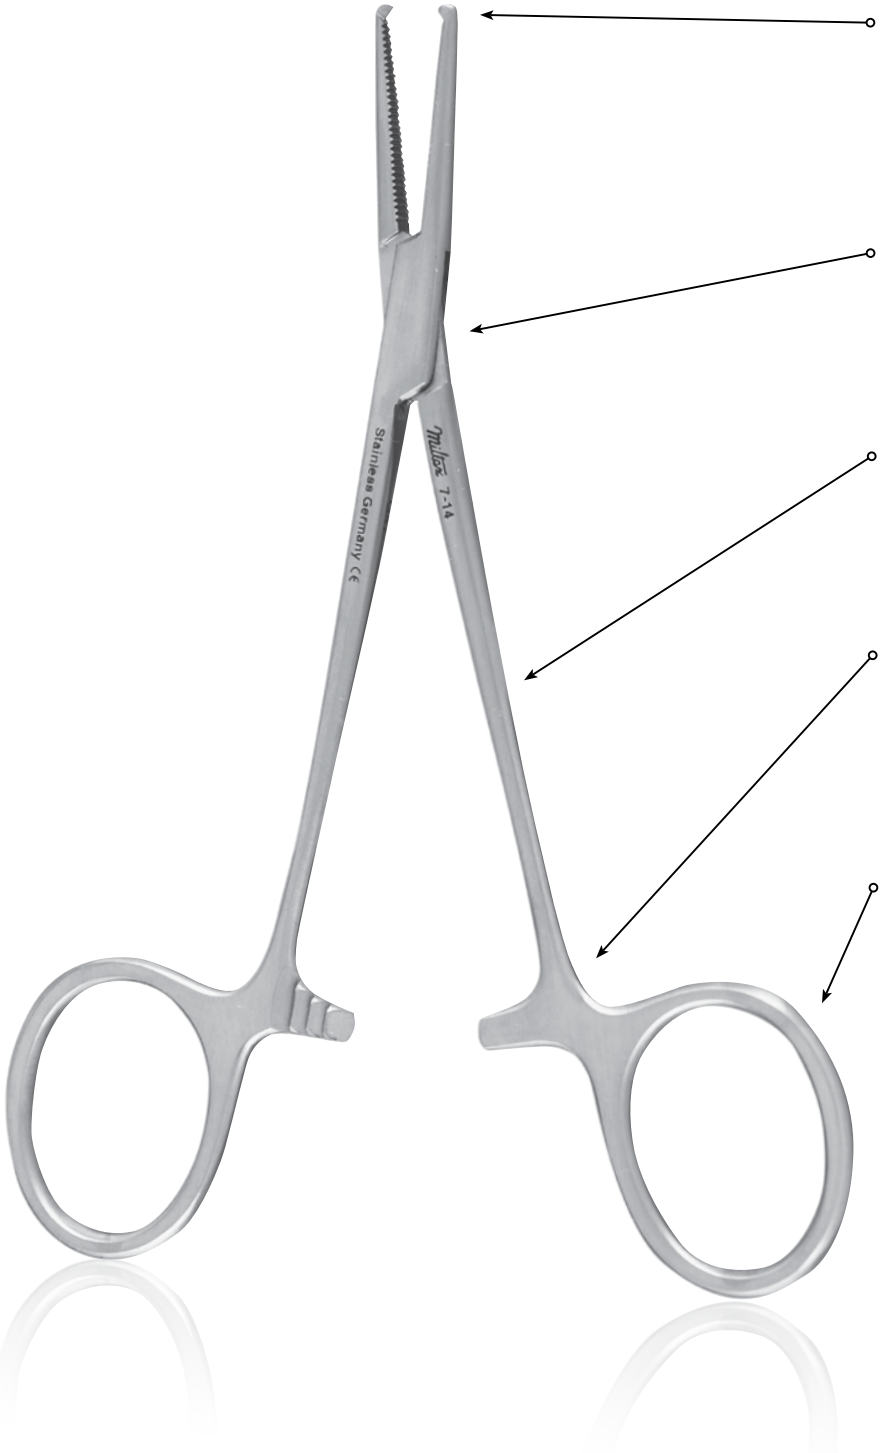
ANATOMY OF MILTEX® HEMOSTATIC FORCEPS

Hemostats are used in a variety of ways, but the primary function is to control or stop the flow of blood through arteries and veins. The diagram below illustrates the important aspects in the construction of a hemostat.



TIPS
The tips should meet first when closing the instrument and the space between the jaws should gradually diminish as the hemostat is being fully closed.

BOX LOCK
The box lock has a smoothly beveled surface to minimize the chance of the instrument catching or snagging other material during surgery.

SHANK
It is essential that the shank be sufficiently flexible so the surgeon develops a certain amount of "feel" with the instrument, thereby improving control.

RATCHET
Ratchets should engage as the tips meet and should operate smoothly as the hemostat is closed. The ratchet should lock securely yet still permit easy release.

RING HANDLES
Well rounded and polished handles provide a more comfortable grip.

HEMOSTATIC FORCEPS
A Construction & Functional Guide

Name	Construction and Functional Description	Nickname
HALSTED	7-2 through 7-20	Mosquito Clamp
	Serrations are full horizontal	
	Straight and curved	
	Length 5" (12.7 cm)	
HARTMAN	7-24 through 7-26	Mosquito Clamp/Baby Mosquito
	Serrations are full horizontal	
	Straight and curved	
	Length 3-1/2" (8.9 cm)	
PROVIDENCE HOSPITAL	7-30 through 7-32	Delicate Kelly Clamp
	Serrations are partial horizontal	
	Straight and curved	
	Length 5-1/2" (14 cm)	
KELLY	7-36 through 7-38	Kelly Clamp
	Serrations are partial horizontal	
	Straight and curved	
	Length 5-1/2" (14 cm)	
CRILE	7-42 through 7-52	Crile Clamp
	Serrations are full horizontal	
	Straight and curved	
	Length 5-1/2" (14 cm) or 6-1/4" (15.9 cm)	
KOCHER	7-66 through 7-68	Kocher Clamp
	Serrations are full horizontal	
	Straight and curved, tips are 1 x 2 teeth	
	Length 5-1/2" (14 cm)	
RANKIN	7-92 through 7-94	Rankin-Kelly Clamp
	Serrations are partial horizontal	
	Straight and curved	
	Length 6-1/4" (15.9 cm)	
ROCHESTER-PEAN	7-118 through 7-148	Pean-Mayo/Mayo-Pean Clamp
	Serrations are full horizontal	
	Straight and curved (used to hold tissue flaps)	
	Length 5-1/2" (14 cm) - 12" (30.5 cm)	
ROCHESTER-OCHSNER	7-150 through 7-167	Ochsner Mayo-Ochsner Clamp
	Serrations are full horizontal	
	Straight and curved, tips are 1 x 2 teeth (used to hold tissue & bone)	
	Length 6-1/4" (15.9 cm) - 10" (25.4 cm)	
ROCHESTER-CARMALT	7-170 through 7-182	Carmalt-Mayo/Carmalt Clamp
	Serrations are longitudinal	
	Straight and curved (used to hold or crush sections of tissue)	
	Length 6-1/4" (15.9 cm) or 8" (20.3 cm)

Microsurgical Needle Holders 124-126

ANATOMY OF A MILTEX® NEEDLE HOLDER

The Miltex® Repair and Service Team offers extensive instrument refurbishment and tungsten carbide jaw replacement services. Contact us for more information.

Carb-N-Sert® (Tungsten Carbide Type)
Carb-N-Sert® jaws are made of tungsten carbide bonded to needle holders of the finest quality stainless steel.

Jaws are custom crafted with very fine teeth and are appropriate to the size of the instrument and the sizes of needles and sutures. Needle holder patterns are also available with smooth Carb-N-Sert® jaws, designed to hold the smallest suture in microsurgical and plastic surgery procedures.

The jaw edge is chamfered to prevent accidental cutting of suture material.

TEETH
Teeth are precision milled into the tungsten carbide, forming sharp pyramid-shapes and providing a positive non-slip surface.

BOX LOCK
The box lock has a distinct non-catch bevel which prevents fraying of suture material.

LASER ETCHING
Miltex© needle holders are laser etched with our logo and catalog number for easy re-ordering.

SATIN FINISH
Each instrument is satin finished to reduce glare.

RING HANDLES
Well rounded and polished handles provide a more comfortable grip.

* Note: cold or chemical sterilization is not recommended for tungsten carbide instruments

Please see our reference section for recommended suture sizes

CARB-N-SERT® Needle Holders

Miltex® Tungsten Carbide Needle Holders ensure a firm grip on needles and suture as well as an extended service life over that of standard stainless steel.

Surgical Needles

Cutting edge needles have one or more honed cutting surfaces and are used to cut dense strong, organized tissues like skin, cartilage, tendons and ligaments.

Taper point needles taper to a point and are used to cut less dense tissues, such as blood vessels, which might leak after piercing. The circle description denotes the curved shape of the needle which is formed in an arc of 1/2 or 3/8 of a circle.

**When ordering, replace "#" symbol with the desired needle size.*
All needles have regular eyes unless otherwise noted.
Needles are not shown actual size.
Needles are packed in packages of 12.

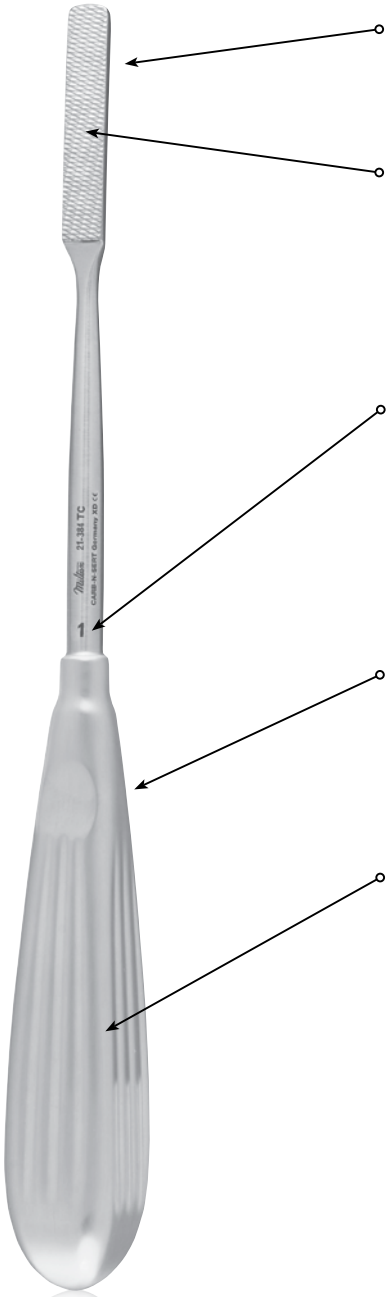
Rasps & Bone Files

When compared to traditional stainless steel patterns, Miltex® Carb-N-Sert® instruments offer long-term savings due to extended service life and higher resistance to wear.

ANATOMY OF MILTEX® RASPS & BONE FILES



CARB-N-SERT® RASPS
Miltex tungsten carbide rasps offer outstanding cutting capability for precise bone contouring.

GRIT OPTIONS
Miltex offers a selection of very fine to coarse grit choices to perfectly accommodate the most delicate, aggressive or challenging surgical procedures.

LASER ETCHING
All Miltex rasps are laser etched with our logo and catalog number for easy re-ordering.

ERGONOMIC DESIGN
Outstanding instrument design combines weight, balance and feel for optimal comfort and performance.

HANDLE
Well rounded and polished edges for better feel and comfort. Gold finished handles differentiate these rasps as precision instruments.

*Note: Cold or chemical sterilization is not recommended for tungsten carbide instruments.

Tonometers

All units are constructed with jewelled hammers to minimize friction. All units are autoclavable. Scale markings are etched for accuracy and scales are inclined, permitting reading from above.

Each unit is supplied with certification that it meets the specifications established by the Committee on Standardization of Tonometers of the AAOO. Each unit is individually packaged in a fitted case with weights and a test block.

REF	Description
18-132	SCHIOTZ Tonometer, original model, with 3 weights (5.5 g, 7.5 g and 10 g) plunger, footplate and test block are stainless steel
18-132A	SCHIOTZ Tonometer, same as no. 18-132, but with ALLEN Plunger Retractor
18-139	Sterilizing Case for SCHIOTZ Tonometers, 6-1/2" (16.5 cm) x 3-1/2" (8.9 cm) x 1-1/4" (3.2 cm), fitted to firmly hold tonometer, weights and test block

"Regional anesthesia provided by local anesthetic agents induces complete peripheral nerve blockade for oral surgery procedures. Blood pressure, heart rate, respiration rate, cardiac output, tissue perfusion, and body temperature are maximized at low inhalant percentages. Regional nerve blocks also provide an opiate sparing effect that reduces analgesic requirements postoperatively. Preemptive analgesia may also play a role in minimizing central sensitization and "wind up" pain. Nerve blocks are performed in all oral surgical procedures in our practice to provide greater patient comfort and safety."

Brett Beckman, DVM, DAVDC, DAAPM
President, American Veterinary Dental Society
Fellow, Academy of Veterinary Dentistry

Composite Placement

Composite placement instruments provide application control over white restoration materials.
Sticky composite material will not adhere to the smooth surface, allowing exact contouring.

These instruments are used to carry composite material, to place and condense composite material and to carve composite material in cavity preparation.

Diamond Burs

Miltex® Diamond Burs are produced using a coating technique that assures approximately 85% of the working surface is coated with a uniform diamond grit.

Color-code rings or gold plated shafts easily identify the grit. The markings conform to ISO standards.

Code	Grit	Marking
EF	Extra Fine	Gold band or gold-plated shaft
F	Fine	Red band
M	Medium	Blue band
C	Coarse	Green band

Micro Diamonds

Micro Diamond Strips have a plastic backing and are extra durable. These strips are used to polish and finish a wide variety of dental materials.

REF	Description
404-40413	Strips, Micro Diamond Strips, Trail Pack, 6 Strips
404-40414	Strips, Micro Diamond Strips, 24 Strips

404-40414

Strip Holding Clips & Forceps

Strip Holding Forceps are designed to securely hold finishing and polishing strips during procedures, eliminating the need to hold the strip or band by hand. The 1x2 diamond-coated barrel tip gently but firmly clamps the strip, allowing precise guiding.

The forceps are sold as a pair and can be used in finishing adhesive restorations, polishing, orthodontics and prophylaxis procedures.

REF	Description

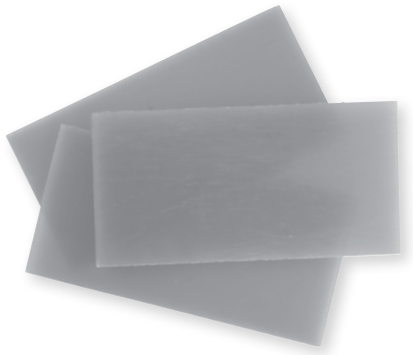
Wax

All Season Wax

All Season Wax is a general purpose wax that can be used for impressions, waxing up and bite registrations.

REF	Description	Type	Size
106-55590	Wax	All Season	1 lb.
107-55710	Wax	All Season	5 lb.



All Purpose Extra-Tough Wax

All Purpose Extra-Tough Wax is a hard pink wax that is used for making occlusion rims and base plates.

REF	Description	Type	Size
110-56270	Wax	All Purpose X-Tough	1 lb.
110-56290	Wax	All Purpose X-Tough	5 lb.

Beauty Pink Wax

Beauty Pink Wax is used to make impressions and bite registrations. It is also excellent for carving. Miltex recommends that Beauty Pink Hard and Extra-Hard Wax be softened in hot water so the wax is heated throughout the sheet. Melting temperature is approximately 140° F.

REF	Description	Type	Size
116-56450	Wax	Beauty Pink, Soft	1 lb.
116-56570	Wax	Beauty Pink, Hard	1 lb.
117-56470	Wax	Beauty Pink, Soft	5 lb.

Mixing Slabs

Glass Mixing Slabs have beveled edges and are used for mixing cements and paste materials. Mixing slabs are coated with a nonstick surface to help prevent material from sticking to the slab. The polyethylene coating imparts a glossy finish that facilitates mixing of materials and the pads have a non-skid polyurethane base which anchors the pad during mixing.

REF	Description	Type
017-41710	Mixing Slabs	Nonstick Coated, 6" x 3"
017-41730	Mixing Pads	1 1/2" x 2", (100 sheets per pad, 4 pads per package)

Prophylaxis Instruments

Miltex® Prophylaxis Instruments provide the doctor and technician with the ability to offer advanced dental care. Our hygiene hand instruments have wear resistant, razor sharp points and come in a variety of handle options.

GripLite® & GripLite® S⁶

GripLite® features a lightweight size 6 resin handle
GripLite® S⁶ features a lightweight size 6 stainless steel handle
Razor-sharp points maintain edge
Ergonomically designed grips provide excellent tactile feel and reduce hand and wrist fatigue
Anti-roll feature prevents instruments from rolling when placed on trays
Color coding by instrument families
Color code rings are available for instrument personalization or procedural setups

Tactile Tone™

Silicone grips provide cushioned, stable grip
Stainless steel handle with ergonomic bumps reduces hand and wrist fatigue
Color coding by instrument families

Stainless Steel

Hollow lightweight handle reduces hand and wrist fatigue
Knurling on handles provides better grip
Variety of handle sizes (Round Size 2, Size 4, Size 6)

Miltex® WELDIN Veterinary Periodontal Instrument Kit For Routine Treatment

The Miltex® WELDIN Periodontal Instrument Kit is a complete collection of veterinary dental instruments and accessories for oral examinations and routine periodontal prophylaxis procedures on companion animal patients.

Dedicated to the advancement of veterinary dentistry since 1981, Carol Weldin, RDH, BS, in conjunction with Miltex, Inc., has specifically selected each diagnostic and working instrument and accessory for the varying lengths and shapes of tooth structures, accessibility to anterior and posterior teeth, sulcus depths, diversity of patients and ease of instrument care and maintenance.

Gracey Curettes - Root Plane

- Shank of the instrument is 3 mm longer than a standard Gracey curette. This allows for scaling, root planing and periodontal debridement of the pocket and root surface of 5 mm or more.
- The offset blade provides perfect working angulation to the tooth surface.

Gracey Curettes -Root Plane Petite

- Shank of the instrument is 3 mm longer than a standard Gracey curette. This allows for scaling, root planing and periodontal debridement of the pocket and root surface of 5 mm or more.
- The petite working end, or blade, is half the length of the standard Gracey instrument which allows for better adaptation of narrow pockets and furcations.
- The offset blade provides perfect working angulation to the tooth surface.

Mx Esonic Scaler

The Miltex® Mx ESONIC Scaler is a unique lightweight air-driven scaler which can be used to scale calculus and debris on natural dentition, implants and composites. The Mx Esonic Scaler is well-balanced and features a quick-disconnect swivel coupler. The Mx Esonic Scaler adapts to any standard 4-hole dental hose and is fully autoclavable.

Complete with three tips: Universal, Periodontal & VersaTip™

- Tips deliver water from dental lines to scaling to help flush away debris and calculus from pocket.
- Scaler is lightweight and well-balanced to reduce hand and wrist fatigue.
- Quick disconnect and swivel coupler offer easy on/off connection.
- Universal and Periodontal Tips allow thorough scaling for natural dentition.
- The VersaTip™ allows periodontal work to be completed around implants and composite restorations.

DENLITE® Illuminated Mirror

Bright White Light - a one-watt LED light provides shadow-free, glare-free illumination that is safe for use in any environment

Convenience - a lightweight cordless ergonomic handpiece

Versatility - split-beam technology and rugged design make the DenLite® Illuminated Mirror ideal for use as a mirror and as a retractor

Safety - disposable mirror heads and autoclavable hand piece reduce the risk of cross-contamination

Part #	Description
DP5000	DenLite LED Kit
DP5150	DenLite LED Light Cartridge
DP5200	DenLite Handle Set
DP5400	DenLite Charger Set
DP5030	DenLite Disposable Mirrors, single use (50 mirrors per box - used with DP5000)
DP5250	DenLite Handpiece Collet Assembly
DP5070	DenLite Illuminator Tip
DP1030-3	DenLite Disposable Mirror, 110V, 3 boxes of 72 mirrors (used with DP1000 AND DP1500)
DP1020	DenLite Lamp for DP1000
DP1520	DenLite Lamp for DP1500

Features	Benefits
One-watt LED Light	Provides shadow-free and glare-free illumination
Cordless Illuminated System	Portable unit, can be used to provide light in any environment
Lightweight System	Reduces hand and wrist fatigue
Disposable mirrors used with the system	Reduces the risk of cross-contamination between patients
DenLite® mirror disassembles for sterilization	Increases infection control protection for patients
Fully charged batteries should last 45 minutes	Light should last for the entire procedure before needing to be recharged
Optional autoclavable transilluminator tip	Provides white light on both sides of the tightly focused, heat-free mirror head
	Provides equal light for detection of cracks and caries
Miltex has an extensive line of Dental Mouth Mirrors	Meets the needs of any Clinician

Plane Surface Mirrors

Miltex® plane surface mirrors (also known as regular mirrors) have a silver coating on the back of the glass.

As a result, light is reflected from the top of the glass as well as from the silver layer. This reflection causes a double image.

"Dental extractions are a very common veterinary procedure. As common as they are, they are not a simple undertaking and should be approached with the same in-depth preparation as any other surgical procedure. In this way, the practitioner will think through the procedure and properly prepare, avoiding common mistakes."

"Having the proper equipment is an excellent first step. The instructional guide and training DVD is designed to help you use the instruments to their fullest extent."

Dr. Brook Niemiec, DVM
Diplomate, American Veterinary Dental College
Fellow, Academy of Veterinary Dentistry
Veterinary Dental Specialties, San Diego, CA

"Regional anesthesia provided by local anesthetic agents induces complete peripheral nerve blockade for oral surgery procedures. Blood pressure, heart rate, respiration rate, cardiac output, tissue perfusion, and body temperature are maximized at low inhalant percentages. Regional nerve blocks also provide an opiate sparing effect that reduces analgesic requirements postoperatively. Preemptive analgesia may also play a role in minimizing central sensitization and "wind up" pain. Nerve blocks are performed in all oral surgical procedures in our practice to provide greater patient comfort and safety."

Brett Beckman, DVM, DAVDC, DAAPM
President, American Veterinary Dental Society
Fellow, Academy of Veterinary Dentistry

Periotome Kit

Periotomes are designed for separating the periodontal ligament fibers from the tooth in preparation for a dental extraction.

Periotomes are available in three double-ended styles: straight blade, hatchet-blade and hoe-blade patterns, giving the user a wide variety of blade options. All instruments feature a lightweight size 6 stainless steel handle.

REF	Description

Miltex® Luxating Dental Elevators

Miltex® Luxating Dental Elevators are designed with small handles to fit into the palm of the hand.

Patterns include both straight and curved blades, ranging from 2 mm to 5 mm, and are made of a one-piece stainless steel construction.

REF	Description	Blade Width	Length

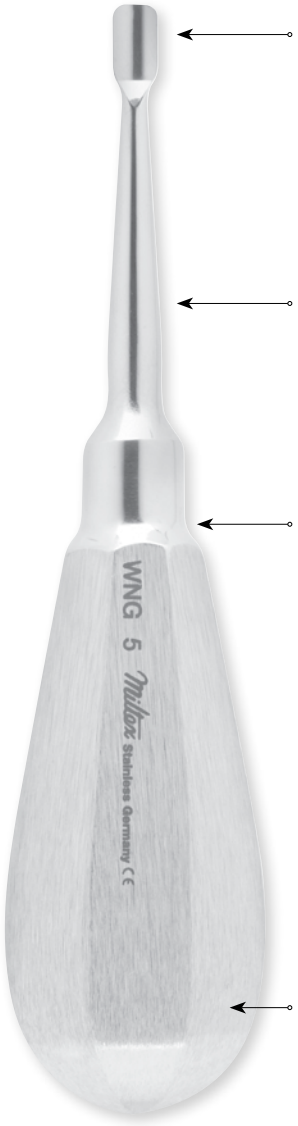
Miltex® Veterinary Winged Dental Elevator Kits

Miltex® Winged Dental Elevators, developed and approved by Dr. Robert B. Wiggs, D.V.M., Diplomate, American Veterinary Dental College, ease the extraction process and provide the Veterinarian Professional with instrumentation that meets diverse clinical needs.

Winged Dental Elevators are shaped to improve instrument adaptation to the root structure. When used in a side-to-side rocking/twisting motion, the blades provide additional leverage, especially when used between teeth in the interdental space. The winged-blades will hook under the buccal bulge, improving the angle of direction in order to lift the tooth and root.



Wing-Shaped Blade

Improves instrument-tooth adaptation. Gradually tapered for easy insertion into PDL.

Narrow Neck

Enhances visibility.

One-Piece German Stainless Steel Construction

Reduces chance of tip separating from handle.

Short Handle

Improves grip and control.

Miltex® Veterinary Winged Dental Elevators

"I have had the opportunity to use winged elevators since I started my residency in 2001. I use nothing but winged elevators for all of my extractions. Winged elevators aid in extraction by being inserted into the periodontal ligament space and hugging the root as it is advanced precisely towards the root tip (apex) using a "side-to-side rocking/twisting motion".

Barron P. Hall, D.V.M.

Diplomate, American Veterinary Dental College
Fellow, Academy of Veterinary Dentistry
Animal Dental Clinic, Vienna, VA

Miltex® Grip Deep™ Extracting Forceps

Miltex® Grip Deep™ Extracting Forceps are designed to allow subgingival access to the root during extractions. Tapered beaks can provide deeper access into the tooth socket and maximize tooth-to-forceps contact. Serrated beaks aid in gripping the tooth surface, which may assist in atraumatic removal of the tooth and can potentially reduce the risk of fractures or trauma to the surrounding hard and soft tissues.

Miltex® Grip Deep™ Extracting Forceps have right and left sides that can be separated to allow access between the box-lock / hinge area for instrument cleaning and processing. Miltex® Grip Deep™ Extracting Forceps are available in 11 patterns.

Modular design for easier cleaning

"I have been using the Miltex Grip Deep Extracting Forceps for two years and have been quite impressed and satisfied with their performance. The extracting forceps grip well and truly aid in my extractions. Also, they are very easy to clean and sterilize. I would recommend a set for anyone performing extractions in the dog and cat."

Tartar Removal Forceps

Tartar Removal Forceps are often used when there is an excessive amount of tartar build up on dog's teeth. The long tip is placed behind the tooth while the curved portion is placed at the top of the tooth on the front side. The clinician will then apply gentle pressure and pull down the front of the forceps. Tartar will then be chipped off by this movement. These instruments are NOT designed for feline teeth nor are they an acceptable replacement for proper cleaning utilizing hand and ultrasonic scalers. This tool is strictly for the removal of large bits of tartar and not for basic tartar build up.

Wound Dressing Products

Miltex® collagen wound dressing products are used to help control bleeding, develop blood clots and to protect the wound site in order for the healing process to begin. The Miltex® product offering includes HeliCote™, HeliPlug™ and HeliTape™. The Heli products are reabsorbed by the body within 10 to 14 days after placement.

These collagen products are packaged in individual clam shells with an easy to peel backing. This packaging reduces tray set up time and makes it easy for clinicians to open packages during procedures. The product is sterile and sold in packs of 10.

REF	Description	Size	Qty/Box
62-200	HeliTape	1" x 3" (2.5 cm x 7.5 cm)	10
62-201	HeliCote	3/4" x 1.5" (1.9 cm x 3.8 cm)	10
62-202	HeliPlug	3/8" x 3/4" (1 cm x 2 cm)	10

HeliTAPE™

Indications

- *Used for dressing minor wounds*
- *Used to aid in the closure of graft sites*
- *Used to help repair the Schniderian Membrane*

HeliCOTE™

Indications

- *Used in palatal donor sites*
- *Used in mucosal flaps*

HeliPLUG™

Indications

- *Used to control bleeding and to develop blood clots in extraction sites*
- *Used to control bleeding and to develop blood clots in biopsy sites*

Liberator® Endodontic Files

Liberator® Rotary Nickel-Titanium Endodontic Files incorporate a unique straight blade design and a manufacturing process that eliminates the traditional helical flutes found on virtually all rotary endodontic files. The result is that Liberator® files will not self-thread into a canal, a major contributor to file separation.

Liberator® files provide a level of safety, control and effectiveness that is unprecedented in rotary nickel-titanium files.

Gates Glidden Drills

Gates Glidden drills are designed with a flame-shaped, boring head on a slender shaft. These drills reduce the curvature in the orifice of the canal, which allows for greater access to the canal for cleaning and obturation. Gates Glidden drills are sold 6 per pack.

Endo-Gripper™ - Slow Speed Handpiece for Finger Instruments

This unique handpiece was designed to provide clinicians with the "best of both worlds" by combining a high-tech device with the traditional finger instrumentation and procedures.

- *Implement a 45 degree turn technique in a quick, efficient manner.*
- *Reduces fatigue by cutting procedure times.*
- *Easy to operate - indexable and features push-button loading*

REF	Description
017-36352	"E" for E-type low-speed (Universal/European)

The Tardie™ - Slow Speed and High Torque Handpiece for Rotary Instruments

The Tardie™ slow speed handpiece system was developed for endodontic procedures where slow and controlled speed (150 to 350 rpm) with high torque is mandatory.

- *Faster procedures to reduce fatigue*
- *Greater Control with a 64:1 Gear Reduction*

REF	Description
017-36400	20,000 rpm Airmotor (only)
017-36401	Reduction Adapter 64:1 (only)
017-36402	Latch Head (only)
017-36403	Tardie Complete System (Airmotor, adapter and angle)
017-36404	Tardie Adapter and Angle (see picture)
017-36406	Ball Bearing Latch Head

The Sprint™ TCM - Torque controlled Electric Endodontic Motor

- Keyboard Panel with digital readout
- 2 Selectable Torque Modes - One mode for allowable torque; and the other for when the unit reverses directions
- Selectable Torque levels from 2 to 50 gm/cm to prevent file separation.
- 3 settings: 1:1, 8:1 and 10:1
- Speed range of 75 to 800 rpm
- The preset torque control automatically reverses before too much torque is reached
- Autoclavable Micro Hand Held Motor

Union Broach® Flex-R® Files - Flexible Roane Tip Stainless Steel File

Flex-R® Files are our most popular Union Broach® endodontic hand file. The files are designed with a non-cutting "Roane" tip designed by Dr. James Roane. Made from high quality stainless steel, the Flex-R® file ensures the most comprehensive cleaning and shaping of the root canal.

FEATURES

Made from the purest stainless steel available
Non-cutting Roane tip
Handles are ISO color coded and printed with the ISO file tip size
Available in a variety of sizes, lengths and rubber stop configurations

BENEFITS

Helps ensure strength and quality of product
Reduces chance of file ledging or occurence of transportation
Allows for easy identification of file

Union Broach® Mor-Flex®

Mor-Flex® files are "K" type files with a cutting tip design. The files allow for comprehensive cleaning and shaping of the canal. The flat end of the handle may be accurately used as a radiographic landmark on X-rays. Mor-Flex® files are made from the purest stainless steel which helps ensure the material strength of the file.

FEATURES

Made from the purest stainless steel available
Cutting tip
Handles are ISO color coded and printed with the ISO file tip size
Available in a variety of sizes and lengths

BENEFITS

Helps ensure strength and quality of product
Allows for more aggressive removal of material from the canal
Allows for easy identification of file

Union Broach® Sharpie® Hedstrom Files

Sharpie® Hedstrom files are good for use on teeth with irregular walls or for removing instruments (i.e. separated files). Sharpie® Hedstrom files tend to cut more aggressively than reamers or "K" type files.

FEATURES

Made from the purest stainless steel available
Handles are ISO color coded and printed with the ISO file tip size
Available in a variety of sizes and lengths

BENEFITS

Helps ensure strength and quality of product
Allows for easy identification of file

Union Broach® Onyx-R® Files (Nickel Titanium Flex-R® File)

Onyx-R® files are made from nickel titanium which allows the files to be more flexible in tight curvature canals. They are designed with a non-cutting "Roane" tip designed by Dr. James Roane.

FEATURES

Nickel Titanium is more flexible
Non-cutting Roane tip
Handles are ISO color coded and printed with the ISO file tip size
Available in a variety of sizes, lengths and rubber stop configurations

BENEFITS

Pre-bending files is not necessary and follow the existing canal path
Reduces chance of file ledging or occurence of transportation
Allows for easy identification of file

Miltex® Hi-5® File

Miltex® Hi-5® files are designed with helical ground flutes. These files have a strong and stiff pentagonal cross section good for penetration in small or calcified canals. Made from high quality stainless steel, Miltex® Hi-5® files provide strength and ensure proper cleaning and shaping.

FEATURES

Made from the purest stainless steel available
Stiff pentagon cross section
Handles are ISO color coded and printed with the ISO file tip size
Available in a variety of sizes and lengths

BENEFITS

Helps ensure strength and quality of product
Resilient and effective cutting instruments
Allows for easy identification of file

Endodilator™

Endodilator™ solution irrigates and softens dentin and chelates root canal walls. Endodilator solution contains 15% EDTA and superficially dissolves root canal walls without harming vital tissue. It is self-limiting and sterilizing and active at a neutral pH level. Endodilator solution is inactivated by oxygen or chlorine.

REF	Description
017-39211	60 ml Bottle

017-39211

Endo-Klean™

Endo-Klean™ solution contains 2.5% sodium hypochlorite and cleans, irrigates and finishes root canals. Endo-Klean solution is intended as an irrigant in the exploration and debridement of root canals, leaving the canal dry and reducing the use of paper points.

REF	Description
033-39214	60 ml Bottle

033-39214

Slide™ - File Lubrication

Slide™ file lubrication cleans and lubricates the canal, reducing the chance of ledging. Slide file lubrication contains 10% urea peroxide in a gel base and is ideal for rotary instrumentation. Slide file lubrication was specifically formulated by Dr. Joseph Dovgan to facilitate instrument movement and to remove debris from the root canal. Slide file lubrication also enhances file efficiency, disinfects and decreases fibrous apical blockage.

033-39210

Marked Gutta Percha and Paper Points

Miltex® Marked Gutta Percha points have millimeter markings on the cones to aid clinicians in identifying how deep in the canal the gutta percha is placed during the obturation procedure. Each radiopaque and cadmium-free gutta percha cone is marked at 19, 21, 23 and 25 millimeters from the tip. The gutta percha cones are hand-rolled with precision to ensure proper ISO specifications are met. Gutta percha cones are available in .02, .04 and .06 tapers in tip sizes from 15 to 140. Accessory points are also available unmarked. All gutta percha is sold in easy-to-dispense plastic trays in counts from 60 to 120 with a 4 year shelf life.

Miltex® paper points are made from a super-absorbent material that maximizes canal cleaning while minimizing residual fibers in the canal that can cause root canal failure and patient sensitivity. The paper points are sold in easy-to-dispense plastic trays in counts from 180 to 200 with a 3 year shelf life.

Dr. Dovgan Condensers

Dovgan Endodontic Condensers are specifically designed for vertical condensation of gutta percha. These condensers feature a double-ended design that saves time during procedures and ISO sizes for easier identification.

Sizes 35 – 80 are available in a 23 mm version and a 27 mm extended length. Crafted from nickel titanium and machined to a .04 mm taper, the condensers ensure proper compacting of gutta percha around curved canals.

Sizes 100 – 140 are stainless steel with a GTX™ non-stick finish applied to the instrument. The GTX™ coating helps reduces the sticking and pull back effect gutta percha can have on condensers in the coronal region of the tooth.

Endodontic Condensers/Pluggers

Endodontic condensers, also known as pluggers, are specifically designed for vertical condensation of gutta percha and other obturation materials. The condensers have 5 mm markings so clinicians can better gauge their working depth.

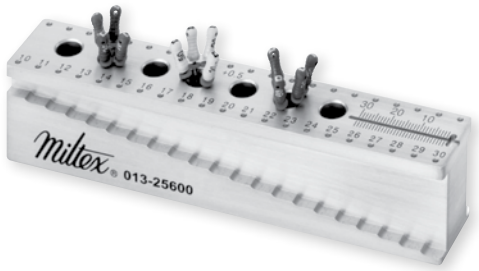
Endo Block

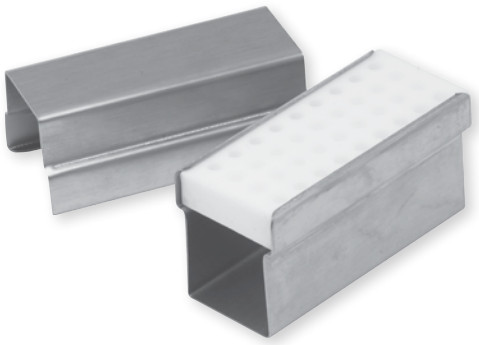
The Endo Block is designed to accurately set stops for all endodontic files. The block is made from anodized aluminum and is autoclavable by any method. The 42 gauges allow precise placement of stops from 10 mm to 30 mm in .5 mm increments and can also be used to size gutta percha and paper points. The seven storage areas are ideal for storing files, gutta percha and paper points, while the endo ruler allows accurate out-of-tooth file measurements.



Part Number	Description
013-25600	Endo block, aluminum

Endo-Top II

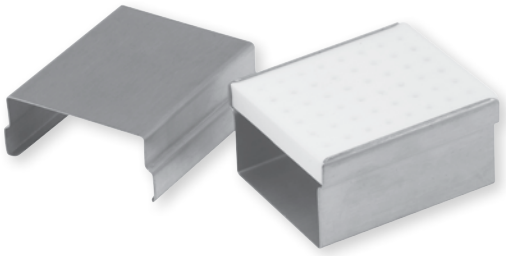
Endo-Top II holds up to 36 finger instruments. It can be used in an upright position or placed on its side. The Endo Top II is the perfect holder for narrow sterilizers.



Part Number	Description
017-48609	15 Hole
017-48634	36 Hole

Endo-Top III

Similar to the Endo-Top III, but larger for increased capacity (48 holes). Great for Rotary Instrument setups.



Part Number	Description
017-48628	48 hole

Gutta Box/Pulpa Box

Color coded aluminum organizer ideal for case-by-case set up.
Sterilizable by dry heat or by autoclave.

	5 x 4 x 5 cm
017-48655	Endo Micro Pulpa - Silver
017-48656	Endo Micro Pulpa - Blue
017-48657	Endo Micro Pulpa - Red

Endodontic Mini-Stand

- Designed by Dr. Thomas P. Mullaney
- All aluminum
- Holds up to 27 finger instruments
- 8 slots for absorbent points
- Handy millimeter ruler on lid
- 3.25" x 1.25" x 2.25"

Part Number	Description
017-47150	Endodontic Mini-Stand

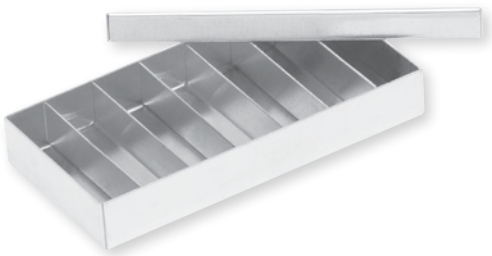
U-46 Finger Instrument Stand

- Millimeter Ruler
- All aluminum
- Holds up to 12 finger instruments
- 2.06" x 1" x 1.81"

Part Number	Description
017-47160	U-46 Finger Instrument Stands

University of Michigan Root Canal Cabinets

- All aluminum
- Style B U-97: 7 compartments - 3.5" x 1.25" x .5"
- Style C U-98: 13 compartments - 6.75" x 2.75" x .5"



Part Number	Description
017-47270	U of M Root Canal Cabinet - Style B
017-47275	U of M Root Canal Cabinet - Style C

U-63 Box for Absorbent Points

- Designed by Dr. Daniel Goodman
- All aluminum
- 3.5" x 3.5" x .5"
- May be used for silver points, gutta percha points, burs, etc.

Part Number	Description
017-47450	U-63 Box

U-62 Root Canal Instrument Organizer

- All aluminum
- Provides instant access to the correct-size endodontic instrument
- 36 compartments for storing packages of endodontic instruments
- Holds up to 432 packages
- An excellent inventory control aid
- 15.625" x 9.3125" x 2"

Part Number	Description
017-47510	U-62 Root Canal Organizer

Work-Utility Box

- Designed by Dr. Stanley Andrews
- Stainless steel
- Small and large sizes
- Watertight for use with germicide
- Small: 4" x 2" x 1.25"
- Large: 5.75" x 2.75" x 1.5"

Part Number	Description
017-4750	Work-Utility Box - Small
017-4751	Replacement Sponge
017-47575	Work-Utility Box - Large
017-47576	Replacement Sponge
U76L	Large
U76S	Small

U-68 Storage Box with 5 Compartments

- All aluminum
- 3.5" x 1.875" x .5"

Part Number	Description
017-47650	U-68 Storage Box

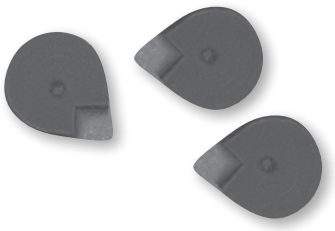
Scratch Brushes

- 2.875" long.
- Fine steel wire bound in plastic handle
- For cleaning endodontic instruments and burs
- May be trimmed when worn by prolonged use

Part Number	Description
017-23400	Scratch Brushes

Silicone Locator Stops

- Aids in establishing the canal depth and the working measurement of each file
- Sterilizable at temperatures up to 450 degrees Fahrenheit
- Clearly-defined shape permits alignment of stop with curve in instruments when instrumenting curved canals
- Easily slides on instruments
- Box of 100



Part Number	Description
017-25504	Red
017-25505	Gray

Endo Blocks

- Plastic Endo Blocks are designed to simulate a root canal
- They are ideal for product demonstrations and for practice with different files
- Box of 5

Sterile Disposable Electrodes

- Loop and Square working ends are manufactured with Tungsten Wire to maintain shape throughout procedure
- Sterile 5-year shelf life
- 5.1" (13 cm) shaft
- 3/32" (2.4 mm) stainless steel connector shaft fits most standard electrosurgical pencils and generators
- Each electrode is sterilized & individually packaged
- Disposable, single-use, Boxes of 5

Periotome Kit

Periotomes are designed for separating the periodontal ligament fibers from the tooth in preparation for a dental extraction.

Periotomes are available in three double-ended styles: straight blade, hatchet-blade and hoe-blade patterns, giving the user a wide variety of blade options. All instruments feature a lightweight size 6 stainless steel handle.

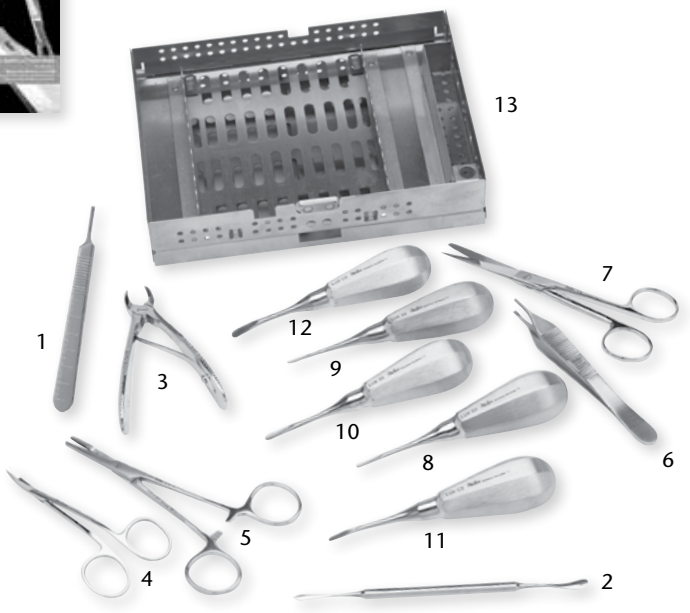
-	Training DVD & Instructional Guide	-	-	(14)



"Dental extractions are a very common veterinary procedure. As common as they are, they are not a simple undertaking and should be approached with the same in-depth preparation as any other surgical procedure. In this way, the practitioner will think through the procedure and properly prepare, avoiding common mistakes."

"Having the proper equipment is an excellent first step. The instructional guide and training DVD is designed to help you use the instruments to their fullest extent."

Dr. Brook Niemiec, DVM
Diplomate, American Veterinary Dental College
Fellow, Academy of Veterinary Dentistry
Veterinary Dental Specialties, San Diego, CA

Miltex® Veterinary Winged Dental Elevator Kits

The Miltex® Winged Dental Elevators, developed and approved by Dr. Robert B. Wiggs, D.V.M., Diplomate, American Veterinary Dental College, ease the extraction process and provide the Veterinarian Professional with instrumentation that meets diverse clinical needs.

Winged Dental Elevators are shaped to improve instrument adaptation to the root structure. When used in a side-to-side rocking/twisting motion, the blades provide additional leverage, especially when used between teeth in the interdental space. The winged-blades will hook under the buccal bulge, improving the angle of direction in order to lift the tooth and root.

Wing-Shaped Blade

Improves instrument-tooth adaptation. Gradually tapered for easy insertion into PDL.

Narrow Neck

Enhances visibility.

One-Piece German Stainless Steel Construction

Reduces chance of tip separating from handle.

Short Handle

Improves grip and control.

Integra™ Miltex® CryoSolutions®

CryoSolutions® is an innovative yet simple device for delivery of high performance Liquefied Nitrous Oxide which allows the clinician to pinpoint the treatment site for rapid freezing and efficacious destruction of unwanted tissue.

This convenient, in-office treatment utilizes the recognized cryogenic advantage of Liquefied Nitrous Oxide vs. competitive chemical agents. This treatment is appropriate for a variety of lesions due to the effectively low and destructive temperature delivered to the treatment site.

Economical - Convenient - Effective

- **A low $1.50 cost per patient application.**
  (Compare to the higher cost of competitive chemical agents)
- **CryoSolutions nitrous oxide will not evaporate from cartridge.**
  (CryoSolutions is ready for use when you are!)
- **Lightweight, portable with pinpoint accuracy.**
  (Lesions are precisely "targeted" with CryoSolutions)
- **Glass tips are autoclavable.**

Miltex® WELDIN Veterinary Periodontal Instrument Kit For Routine Treatment

The Miltex® WELDIN Periodontal Instrument Kit is a complete collection of veterinary dental instruments and accessories for oral examinations and routine periodontal prophylaxis procedures on companion animal patients.

Dedicated to the advancement of veterinary dentistry since 1981, Carol Weldin, RDH, BS, in conjunction with Miltex, Inc., has specifically selected each diagnostic and working instrument and accessory for the varying lengths and shapes of tooth structures, accessibility to anterior and posterior teeth, sulcus depths, diversity of patients and ease of instrument care and maintenance.

Microsurgery Alligator Ear Forceps

Micro Alligator Ear Forceps are the most delicate instruments for otological surgery. Excellent for foreign body removal and ideal for precision grasping and extraction of cerumen from the ear canal. Serrated and oval cup jaw patterns are available in sizes 0.5 mm to 0.8 mm wide in your choice of stainless or ebony finish (see 19-2150-B).

REF	Description	Type	Shaft Length
19-2081	Micro Alligator Ear Forceps	serrated jaws, 0.6 mm wide	3-1/4" (8.3 cm)
19-2081-B	Micro Alligator Ear Forceps	serrated jaws, 0.6 mm wide, ebony finish	3-1/4" (8.3 cm)
19-2090	Micro Alligator Ear Forceps	oval cup jaws, 0.5 mm wide	3-1/4" (8.3 cm)
19-2090-B	Micro Alligator Ear Forceps	oval cup jaws, 0.5 mm wide, ebony finish	3-1/4" (8.3 cm)

Ophthalmic General

Schiotz Tonometers are constructed with jewelled hammers to minimize friction and feature inclined scale markings to allow reading from above. Schiotz Tonometers are autoclavable and are etched for accuracy.

Each unit is supplied with certification that it meets the specifications established by the Committee on Standardization of Tonometers of the A.A.O.O. Each Schiotz Tonometer is individually packaged in a fitted case with weights and a test block.

REF	Description
18-132	Schiotz Tonometers Original Model, with 3 weights (5.5, 7.5 & 10 g), stainless steel plunger, footplate & test block, remainder made of rust free materials
18-132A	Same as no. 132, but with ALLEN Plunger Retractor*
18-134	Schiotz Tonometers Improved Model, with 4 weights (5.5, 7.5, 10 & 15 g), mirror insert on scale reduces error of parallax, made entirely of stainless steel
18-134A	Same as no. 134, but with ALLEN Plunger Retractor*
18-139	Sterilizing Case for Schiotz Tonometers 6-1/2" (16.5 cm) x 3-1/2" (8.9 cm) x 1-1/4" (3.2 cm) fitted to firmly hold tonometer, weights & test block

** Allen Plunger Retractor holds plunger in retracted position, flush with footplate until tonometer is in place on cornea. This feature can potentially reduce damage to corneal tissue.*

My Smallest Orthopedic Surgery Patient

As a zoo veterinarian, my patients range in size from miniscule to mammoth. Over the past 25 years, I've worked on everything from insects to elephants, but I will never forget my smallest orthopedic surgery patient, a recently fledged white-lined tanager (a small bird species native to Central and South America), 2 inches tall and weighing in at a whopping 25 grams!

"Sparky" had hatched in the Philadelphia Zoo's walk-through Jungle Bird Walk exhibit about 3 weeks earlier, and was being raised by her very attentive parents. She had been flying around the heavily planted aviary for a few days when the bird keepers routinely captured her to place a numbered plastic identification band on her leg. While placing the band, a keeper noticed fresh blood on the feathers under the left wing and called me immediately on my walkie-talkie.

Since any amount of blood loss from a bird that small can be a serious issue, I rushed across the Zoo to get a look at the wing. On the way there, I was hoping it was a simple problem, such as a broken blood feather that could be easily remedied by removing the damaged feather. Once I saw her wing though, I realized the Sparky had sustained an open fracture of her humerus and would require emergency surgery. She was transported back to the Zoo's Animal Health Center and anesthetized for further examination and treatment.

Radiographs confirmed an oblique fracture about two-thirds of the way down the humerus. Because my goal was to end up with a fully flighted bird, I was concerned that if the wing was simply splinted and bandaged, the fracture fragments might be poorly aligned and the fracture site might not be stable enough for proper healing. A humerus the diameter of a toothpick seemed unsuitable for an external fixator, but I recalled a picture from veterinary school of someone using a hypodermic needle as an IM pin in some other small creature, so decided to give that a try with Sparky.

By superimposing various needles on the preoperative radiograph, I chose a 1 inch 23 gauge needle as the IM pin. Holding the needle hub, I inserted the needle tip retrograde from the fracture site up through the proximal humeral fragment and out through the top of the shoulder. The needle hub was then clipped off at the fracture site, and the needle advanced normograde into the distal humeral fragment to the region of the elbow. Intraoperative radiographs showed the needle to be good position, so the remaining exteriorized portion of the needle at the shoulder was snipped off, the skin wounds sutured, and the wing splinted to the body.

Once a week, Sparky was re-anesthetized to change the wing bandage and check fracture healing. After 4 weeks, she was moved to a bigger completely enclosed cage, and the wing was left unbandaged so she could start exercising with the IM pin still providing some support. At 6 weeks post-surgery, the pin was finally removed and she continued improving her flying ability, and at 8 weeks was flying well enough to move to her own big exhibit.

The last time I saw Sparky was 2 years later when I did a pre-shipment physical exam prior to her leaving for another zoo. She was going to be paired with an unrelated male white-lined tanager in hopes that a future generation of tanagers would result. She looked (and flew) very well. I realized that having excellent orthopedic equipment is always a plus, but so is a little ingenuity and a great support staff!

By Keith C. Hinshaw, DVM, MPVM
Director, Department of Animal Health
Philadelphia Zoo, Philadelphia, Pennsylvania

Sparky chirping happily after undergoing orthopedic surgery

Clinician Spotlight

The Shepherd Spay

It is 2:15 and the last surgery scheduled has begun. The day has been full of surprises, the surgery staff are late for their lunch breaks, I am tired and my feet ache. The radio is blasting yet I can still hear my stomach gurgling—afternoon appointments start in 45 minutes.

I had only one more spay to go - an obese German Shepherd. As I curse myself for making an exception to the hospital's policy of "no in-heat spays," and recommending a gastropexy while I am at it, I proceed. I clamp with Rochester-Carmalt forceps then double ligate each pedicle and finish the spay. In the seconds it takes to obtain and open the suture to start the gastropexy I turn back to a belly full of blood. A minute, two packs of lap sponges, 150 heart beats and 3 additional Rochester-Carmalt clamps later, I breathe a sigh of relief. I have yet to find out what was bleeding, but I have quickly isolated every pedicle, grasped it, clamped it and all bleeding has ceased.

In my head, I run through the method taught in vet school "triple clamp, double ligate, grasp pedicle with hemostats to monitor for hemorrhage as the final clamp is released." The final step I had skipped in my hurry to finish the spay. Now I diligently grasp each pedicle with mosquito hemostats and release the Rochester-Carmalt forceps that may be currently preventing the poor dog's exsanguination. The guilty vessel is isolated, transfixed and I move on.

Hours later, she has recovered well, is wagging her tail and I congratulate myself. Not for staying calm when faced with a belly full of blood, or managing to be on time for my 3pm appointment—but instead for something I had done months before. I replaced that spay pack that had long passed its prime. You know the one; it has the Rochester-Carmalt forceps with the loose ratchets, dull Metzenbaum scissors and Olsen-Hegar needle drivers that no longer consistently grasp suture. Because, in that minute when I faltered in my surgical technique, I knew I could count on my Miltex® Instruments.

MeisterHand By Miltex

INTRODUCTION

Meisterhand™ Instruments are expertly crafted from German surgical grade stainless steel to meet the very high standards demanded by the Hospital and Treatment Room clinical staff.

This advantageously priced product is ideal for cost containment while offering greater quality and value compared to instruments from any other source.

A wide range of General Instruments is included in the Meisterhand™ line as well as an extensive selection of Specialty Instrumentation, both manufactured with our unique matte finish, and ideal for a variety of surgical procedures and settings.

Vantage® By Miltex®

INTRODUCTION

Vantage® Instruments are forged from high quality Japanese stainless steel and then ''finished'' at low cost manufacturing facilities carefully selected by Miltex to ensure a quality instrument available to our customers at a cost competitive price.

This combination offers a high quality product at a ''mid-grade'' price and ensures a pattern consistency throughout the Vantage® product line.

The unique ''Advantage'' from Miltex is to provide positive choices to the Professional when confronted with important budgetary considerations.

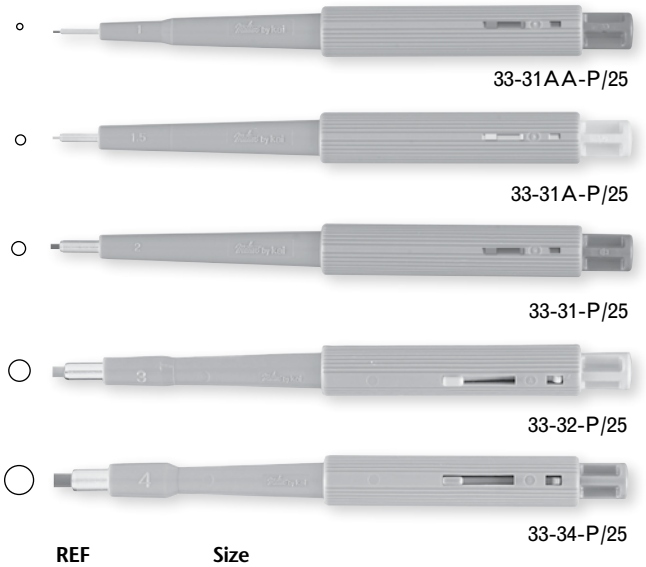
Biopsy Punch, Sterile

Now you can have the convenience of disposable punches along with the quality you expect from Miltex. Miltex offers an extensive product line of sterile disposable biopsy punches that are manufactured from the finest grade surgical steel to ensure superior cutting every time.

- Seamless, stainless steel, razor-sharp cutting edges eliminate torn or pulled biopsies
- Ribbed handle provides comfort and control
- Convenience of disposables, single-use
- Sterile, 5-year shelf life
- Sizes clearly marked on each punch
- Individual color-coded blister packs

Biopsy Punch with Plunger System

- Effortless ejection of lodged specimens
- Available in boxes of 25
- Color-coded by size; 5 sizes available



REF	Size
33-31AA-P/25	1.0 mm w/plunger

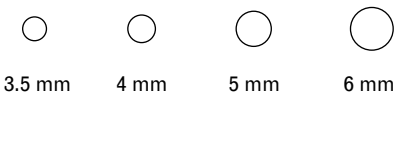
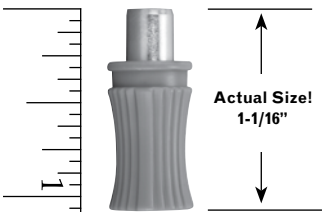
Each box contains 50 sterile color-coded blister packs.

Short Handled Biopsy Punch, Sterile

The Short Handled Biopsy Punch is designed to take tissue samples in all areas of the mouth. The Short Handled Biopsy Punch features the same razor-sharp blade as the original Miltex® biopsy punches, but the handle has been shortened to allow access in the hard to reach posterior areas of the mouth. The total length of the instrument is 1-1/16 inch!

This product is provided in sterile, individually wrapped packets for easy use and is available in the four most common sizes: 3.5 mm, 4 mm, 5 mm and 6 mm.





REF	Description	Size	Quantity
33-33-SH	Short Handled Biopsy Punch	3.5 mm	50/box

Miltex® BiopBlade™, Sterile

- Ideal for tissue saucerization and shave biopsy
- Incorporates a super sharp blade with rear Finger Guard
- Flexible design allows the blade to be positioned at any angle for the intended procedure
- Disposable, one-time use only
- Sterile, 5-year shelf life

REF	Description	
33-100	Miltex BiopBlade	50 per box

Dermal Curettes, Sterile

- Seamless, stainless steel, semi-sharp cutting edge featuring a unique symmetrically ground beveled edge
- Textured handle provides better comfort and control
- Sterile, 3-year shelf life
- Individually packaged in peel-apart pouches
- Convenience of disposables, single-use
- Sizes clearly marked on each curette
- Each dispenser box contains 50 curettes
- 5 sizes available for a wide range of applications

Safety Scalpels, Sterile

- Complies with OSHA directive for the Needlestick Safety & Prevention Act
- Stainless steel, razor-sharp cutting edge for superior cutting and clean incisions
- Pre-assembled, fully retractable scalpel blade is user activated
- Individually packaged in sealed peel-apart pouches
- Metric ruler on each scalpel to assist in determining incision length
- Each dispenser box contains 10 safety scalpels

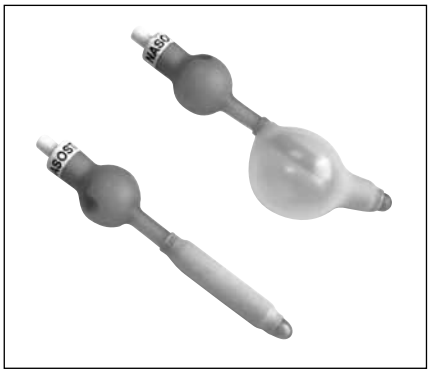
Nasostat™ Treatment of Epistaxis

- Nasostat™ may be used in conjunction with anterior packing
- Will control bleeding while minimizing patient discomfort associated with nasal packs
- Is a safe and easily tolerated alternative to other treatments for Epistaxis. (e.g. cautery)
- Sterile, 1-year shelf life



REF	Description
41900	Nasostat Regular, Sterile 5/Bx
41901	Nasostat Slimline, Sterile 5/Bx
41902	Nasostat Large, Sterile 5/Bx
41903	Nasostat Small, Sterile 5/Bx

Surgi-Clamp, Plastic

- Non-sterile operatory clamp
- Multi-functional
- Safe for steam sterilization
- Designed for reuse
- No rust or stain problems

REF	Description	
374201	Surgi-Clamp, Plastic	100/bx
374202	Surgi-Clamp, Plastic	25/bx

Surgi-Prep, Depilatory

- Fast-acting removal of body hair; dissolves unwanted hair below skin surface
- Lasts days longer than shaving
- Pain free formula; removes even coarse, stubborn hair
- No nicks, cuts or prickly stubble compared to shave prep
- Works in 10 minutes

REF	Description	
600900	Surgi-Prep Depilatory	12/bx

Surgi-Brush, Sterile

- Sterile brush used for cleaning surgical instruments in the operating room
- Double-ended nylon bristle brush
- One end of brush has 3 rows of bristles for general decontamination
- One end contains a single row of bristles for fine, delicate cleaning
- Disposable, one-time use only
- Sterile, 1-year shelf life

PROTECT YOUR OFFICE STAFF, YOUR PATIENTS & YOUR INVESTMENT

The cleaning and sterilization process protects your office staff and your patients. By utilizing proper instrument care and cleaning products specifically designed for your surgical instruments, you can protect your instrument investment.

Key Terms:

- Sterile - free from all living organisms.
- Sterilization - a process that destroys all forms of microorganisms, including spores, from inanimate objects.
- Disinfection - a process that eliminates many or all disease producing microorganisms, except spores, from inanimate objects.
- Cleaning - the most important step in the instrument care process. Cleaning involves the removal of adherent visible soil (blood and tissue debris) from the surface of instruments.

Key Points:

- Always follow manufacturer's directions for use for instrument processing products and equipment.
- Never process disimiliar metals together (e.g. chrome, copper, stainless steel).
- Always process instruments with box locks or hinges (e.g. scissors, needle holders, hemostats, etc.) in the open and unlocked position. Failure to do so can result in fracturing the box locks and in instrument failure.
- Always lubricate areas with "metal to metal" action after cleaning instruments. Include hinges, box locks, screws and jaws. Use a non-silicone, water-soluble surgical lubricant. Never use industrial oils or lubricants.
- Never use bleach to clean your instruments; bleach is corrosive and will void all instrument warranties.
- Chemical / cold sterilization solutions are not recommended for instruments.
- Steam (autoclaving) is the preferred method for sterilizing metal instruments.

Recommended Steps in Cleaning, Sterilization & Maintenance of Miltex® Surgical Instruments

1. HOLDING/PRESOAK

Never hold instruments in a dry container. Doing so allows blood and debris to dry onto instrument surfaces and makes cleaning more difficult. If rinsing and decontamination processes are not immediately available, pre-treat instruments or hold them in a neutral pH holding/presoak enzymatic solution after patient use but before actual cleaning. Miltex® Instrument Prep Enzyme Foam (3-760) is a ready to use foaming spray for pre-cleaning soiled instruments and scopes. Simply spray the foam on instruments until they are ready for processing. Also, Miltex® EZ-Zyme® (3-750 and 3-755) neutral pH all purpose multi-enzyme concentrate is ideal for instrument presoaking and pre-cleaning. As soon as possible, rinse and clean as follows:

2. RINSING

Always wear safety protection gear.
Immediately after surgery, remove organic materials by rinsing instruments under warm (not hot) running water. Rinse should remove most blood, fluids and tissue. Do not process dissimilar metals (stainless, copper, chrome plated, etc.) together.

Note: *Disinfection can be included to protect medical personnel from contamination during cleaning; however, protection also can be accomplished by following standard precautions by wearing appropriate PPE as promulgated by OSHA & AORN.*

3. CLEANING

All blood, dried body fluids and tissue should be completely removed from instruments prior to sterilization. Several methods for removing these materials are available.

A. **Soak**: An enzymatic cleaner bath (soak) such as Miltex® EZ-Zyme® (3-750 and 3-755) or a solution of water and neutral pH (7) detergent such as Miltex® Surgical Instrument Cleaner (3-720, 3-725) is effective in removing organic material from instruments. Use distilled (demineralized) water, if possible. Instruments should be fully submerged for at least 10 minutes. Do not let "sharps" (scissors, knives, osteotomes, etc.) touch each other. Ensure that dissimilar metal instruments are separated. Rinse instruments under running water to remove solutions and change solutions frequently.

B. **Ultrasonic Cleaning**: Most instrument manufacturers recommend ultrasonic cleaning as the most effective way to clean surgical instruments, particularly instruments with hinges, box locks and other moving parts.

- All instruments must be fully submerged in an open position using distilled (demineralized) water, if possible. To prevent possible surface scratching make sure that "sharps" do not touch other instruments. Also, separate instruments of dissimilar metals.
- Process instruments for the full recommended ultrasonic cleaning cycle. Change solution frequently or as often as the manufacturer recommends.
- Rinse instruments with water to remove the cleaning solution. Miltex® EZ-Zyme® (3-750 and 3-755) or Miltex® Surgical Instrument Cleaner (3-720, 3-725) can be safely used with all ultrasonic units.

C. **Automatic Washer Sterilizers**: Following manufacturers' recommendations, ensure that instruments are lubricated before the sterilization cycle and after the last rinse cycle.

CAUTION: Needle holders and forceps may crack if sterilized with ratchet in closed position.

D. **Manual Cleaning**: If ultrasonic cleaning is not available, observe the following steps:

- Use stiff nylon cleaning brushes (3-1000). Do not use steel wool or wire brushes except stainless steel wire brushes (3-1001) specially recommended for instrument serrated areas, bone files, burs or on stained areas of knurled handles.
- Use only neutral pH (7) detergents such as Miltex® Surgical Instrument Cleaner (3-720, 3-725). If not rinsed off properly, low pH (acidic - less than 6 pH) detergents break down the stainless protective surface resulting in pitting and/or black staining on instruments. High pH detergents (alkaline - more than 8 pH) can cause brown stains (phosphate surface deposit) which can also interfere with the smooth operation of instruments. Most brown stains are not rust and are easily removed with Miltex® Surgical Instrument Stain Remover (3-740).
- Brush delicate instruments carefully, and if possible, separate them from general instruments.
- Make sure instrument surfaces are visibly clean and are free from stains and tissue. Miltex® Surgical Instrument Stain Remover (3-740) can help remove residue stains. This is also a good time to inspect each instrument for proper function and condition.
- Check scissors' blades to ensure proper function. Blades should open and close smoothly. Test cutting performance at 3/4 length of the blade with the materials recommended below. Scissors should cut all the way to the tips. Recommended cutting test materials:
  - Fine/Delicate scissors: Surgical glove
  - Medium scissors: Single layer of stocking/cast netting
  - Large/Utility scissors: Double layer of stocking/cast netting
- Check forceps (pickups) for proper jaw alignment. Teeth must meet properly without catching.
- Check hemostats and needle holders to ensure jaw tips close in first ratchet position and that the entire jaw closes in third ratchet position. Check instruments for loose hinges and verify that they lock and unlock easily. Also check instruments for wear on jaw surfaces.

Recommended Steps in Cleaning, Sterilization & Maintenance of Miltex® Surgical Instruments

- Suction tubes should be clean inside.
- Test Biopsy Punches by punching a clean hole in 3-6 mil thick poly-bag material. If poly-bag material is not available, use tissue paper.
- Retractors should function properly.
- Cutting edge instruments and knives should be sharp and free of damage.
- After scrubbing, rinse instruments thoroughly under running water. While rinsing, open and close scissors, hemostats, needle holders and other hinged instruments to ensure that hinged areas are rinsed out and that no debris remains.

4. AFTER CLEANING

Separate dissimilar metals prior to sterilizing/autoclaving. If instruments will be stored, allow them to air-dry and store them in a clean and dry environment.

5. AUTOCLAVING

A. **Lubricate all hinged instruments** which have any "metal to metal" action at the screw or box lock. A non-silicone, water-soluble surgical lubricant such as Miltex® Lube (3-700 or 3-705) is recommended. Do not use industrial oils or lubricants.

B. **Sterilize instruments** either individually or in sets.

- **Individual Instruments**: Disposable paper or plastic pouches are ideal. Make sure to use a wide enough pouch for instruments with ratchet locks so instruments can be sterilized in an open (unlocked) position. Instruments locked during autoclaving can develop cracked hinges (box locks) or other problems because of heat expansion. If wrapping instruments, make sure the towel does not contain detergent residue which can stain instruments.
- **Instrument Sets**: Unlock all instruments and sterilize in an open position. Place heavy instruments on the bottom of set (when two layers are required). Do not overload the chamber because an air pocket that hinders steam penetration may form.

CAUTION: With most portable tabletop autoclaves, unlock the door and open it no more than a crack, about 1/4" (6.4 mm). (at the end of the autoclave cycle and before the drying cycle) Then run the dry cycle for the period recommended by the autoclave manufacturer. If the autoclave door is fully opened before the drying cycle, cold air will rush into the chamber and will cause condensation on the instruments, potentially resulting in water stains or causing wet packs. Make sure autoclave filters and chambers are cleaned as recommended by the manufacturer. Miltex® Surgical Instrument Stain Remover (3-740) is effective in removing stains and in cleaning the autoclave chamber. If you have any unusual staining on your instruments after sterilization, obtain our Instrument Care DVD (3-810) or contact your local Miltex® representative.

6. CHEMICAL/COLD STERILIZATION

Most chemical/cold sterilization solutions render instruments sterile only after 10-hour immersion. This prolonged chemical action can be more detrimental to instruments than the usual 20-minute autoclave cycle. If the instruments need to be "disinfected" only, a chemical/cold sterilization soak is acceptable, as disinfection will take approximately 10 minutes or more. Check manufacturers' specifications. Also see our warning in using bleach (paragraph 3).

Keep in mind the difference between:

- Sterile - an absolute term (no living organism survives); and
- Disinfected - basically clean. Some organisms may survive. Always use the proper sterilization/cleaning technique to render the instrument in the required condition for use.

CAUTION: For instruments with tungsten carbide insert jaws, the use of chemical/cold sterilization solutions is not recommended as it may deteriorate the instrument's jaw.

We recommend these Miltex products to properly safeguard and care for your quality instruments.

3-760	Instrument Prep Enzyme Foam 24 oz. spray	• Holding & presoak
3-750	EZ-Zyme®, All Purpose Enzyme Cleaner Box 32 - 3/4 oz. packets	• Holding & presoak • Soak cleaning • Ultrasonic cleaning • Manual cleaning • Laundry presoak
3-755	EZ-Zyme®, All Purpose Enzyme Cleaner 1-gallon pump bottle	
3-700	Spray Lube 8 oz. spray bottle	• Before autoclaving
3-705	Surgical Instrument Lubricant 1-gallon pump bottle	
3-710	Surgical Instrument Cleaner & Lubricant 1-gallon pump bottle	• Manual cleaning • Washer/decontaminator • Ultrasonic cleaning
3-720	Surgical Instrument Cleaner 8 oz. spray bottle	• Soak cleaning • Ultrasonic cleaning • Manual cleaning
3-725	Surgical Instrument Cleaner 1-gallon pump bottle	
3-740	Surgical Instrument Stain Remover 3 oz. jar	• Stain removal
3-1000	Nylon Instrument Cleaning Brushes 3-pack	• Manual cleaning of instruments
3-1001	Stainless Steel Instrument Cleaning Brushes 3-pack	
3-800	Instrument Care System	• Complete instrument care
3-810	Instrument Care DVD	• Training personnel in the care of instruments

Instrument Stain Guide

Color	Cause of Stain	What to do
Orange-Brown to Reddish stain (looks like rust)	Perform eraser test. If the stain rubs off and no pitting exists, problem is most likely from: • Detergent residue on towels or high alkaline >8 pH detergent which leaves a phosphate surface deposit • Dried blood • Iodine or Betadine residue	• Change to neutral pH detergent. We recommend Miltex® Surgical Instrument Cleaner. • Check pH of towels with litmus to verify if detergent residues are present. • Rinse the instruments in warm water for at least 30 seconds • Use a stain remover on both the instruments and autoclaves • If problem persists, consider changing to distilled or demineralized water, particularly if the local water supply is high in iron or other minerals.
Black, Brown & Pitting	Subjected to an Acidic Low <6 pH substance such as: • Low pH detergent residues on instrument surface or from towels • Exposure to other chemical compounds from "cold soaking" • Exposure to bleach	• Change to neutral pH detergent. We recommend Miltex® Surgical Instrument Cleaner. • Check pH of towels with litmus to verify if detergent residues are present. • Eliminate exposure to chemicals or bleach • Rinse instruments thoroughly and consider using distilled or demineralized water, particularly if the local water supply is high in iron or other minerals. • Use stain remover on both the instruments and on autoclaves. • Eliminate any use of bleach. • If pitting remains, send the instrument back to the manufacturer for evaluation.
Rainbow or Multi-Color	• Heat compromised, tensile strength is compromised	• Check the autoclave for proper temperature.
Bluish-Green Bluish-Black	• Cross contamination between dissimilar metals	• Separate instruments by metal type before cleaning or autoclaving instruments.
Bluish-Gray (w/possible pitting)	• Improper preparation of cold sterilization solutions	• Follow solution manufacturer's directions closely, particularly temperature and soak times. • Use distilled or demineralized water. • Change solution per manufacturer's instructions.
Rust	• Sterilizing instruments of dissimilar metals in the same cycle. • Chemicals in detergents or excess amounts of iron or other minerals from local water supply. • New instruments may be slightly magnetized during the manufacturing process.	• Separate instruments by metal type prior to sterilization. • Use neutral pH detergents and change to distilled or demineralized water, particularly if the local water supply is known to contain iron or other minerals. • Wipe off as much residue as possible, leaving shiny metal underneath. Use a stain remover on both the instruments and autoclaves. • The instruments lose their magnetic property after several autoclaving sequences
Spotting Light or Dark colored	• Slow evaporation of water drops with mineral content • Instrument wraps and towels may contain detergent residue.	• Eliminate water droplets and moisture by adhering to autoclave manufacturer's operating instructions. • Use Miltex® Stain Remover on both the instruments and autoclaves • Change to distilled or demineralized water, particularly if the local water supply is known to contain iron or other minerals. • Thoroughly wash and rinse wraps and towels with a neutral pH detergent.

MILTEX® Instrument Prep Enzyme Foam

Ready to use foaming spray for pre-cleaning soiled instruments. Ideal for applications where instrument cleaning is not immediately available. Simply spray on instruments until ready for decontamination and cleaning.

REF	Description
3-760	Instrument Prep Enzyme Foam, 24 oz. (0.71 liter) spray bottles (case of 12)

MILTEX® EZ-Zyme® All Purpose Enzyme Cleaner

Neutral pH multi-enzyme liquid concentrate ideal for instrument presoak, ultrasonic cleaning, laundry presoak and evacuation system cleaner. Ideal for cleaning hard to remove proteinaceous (mucus and tissue) and lipid (fatty) materials from the surfaces of surgical/dental instruments, linen, water submersible equipment or where mechanical scrubbing is impractical.

REF	Description
3-750	EZ-Zyme All Purpose Enzyme Cleaner, 3/4 oz. (22 ml) packets (dispenser box of 32). Contents of 1-box makes 32 gallons of solution.
3-755	EZ-Zyme All Purpose Enzyme Cleaner, 1-gallon bottle (3.78 liter). Contents of 1-gallon container makes 170 gallons of solution.

MILTEX® Surgical Instrument Cleaner

Super concentrated formula for manual and ultrasonic cleaning or for soaking of surgical instruments, accessories and glassware.

- Neutral pH
- Biodegradable
- Rinses free, leaves no residue
- Phosphate-free
- Concentrated

REF	Description
3-720	Surgical Instrument Cleaner, 8 fl. oz. (0.24 liter) bottles (case of 12). Contents of one 8 oz. bottle makes 32 gallons of solution.
3-725	Surgical Instrument Cleaner, 1-gallon bottle (3.79 liter). Contents of 1-gallon container makes 512 gallons of solution.

(Contact Distributor for availability)

MILTEX® Surgical Instrument Cleaner & Lubricant

A dual-purpose instrument cleaner and lubricant. Chemically engineered for use as a presoak or for manual cleaning, washer/decontaminators, ultrasonic cleaners and cart washers.

- Cleaner & Brighter Instruments
- Removes Stains, Blood and Mineral Deposits
- Biodegradable
- Concentrate, Lower Cost Per Use

REF	Description
3-710	1 Gallon, 128 fl. oz. (3.79 liter) (see label for concentration rates)

MILTEX® Instrument Lubricant

A water emulsible soaking agent works to extend the life of surgical instruments. Concentrated non-silicone lubricant and rust inhibitor. Use daily to keep moving parts operating smoothly.

REF	Description
3-705	1 Gallon, 128 fl. oz. (3.79 liter) (see label for concentration rates)

MILTEX® Spray Lube (Surgical Instrument Lubricant)

Pre-mixed, non-silicone and anti-corrosive formula in a ready to use 8 oz. spray pump bottle. Steam permeable and water soluble. Helps prevent spotting, staining and rusting. Lubricates instrument box locks, screw locks, scissor blades and any other metal on metal moving parts.

REF	Description
3-700	Spray Lube, 8 fl. oz. (0.24 liter) bottles (case of 12)

(Contact Distributor for availability)

MILTEX® Surgical Instrument Stain Remover

Powder formula removes stains, tarnish and restores luster to surgical instruments, autoclaves, ultrasonic cleaners, stainless steel countertops and other surfaces. Ideal for use on stainless steel, chrome, nickel, brass, copper and silver.

- Effective on instruments, autoclaves, ultrasonic cleaners or any stainless steel, tile or plated surface
- Will not harm instrument surfaces
- Easy, fast, convenient to use
- Economical - a little goes a long way

REF	Description
3-740	MILTEX Surgical Instrument Stain Remover, 3 oz. (85 grams), (case of 12)

MILTEX® Instrument Care Kit System

REF	Description
3-800	Spray Lube (3-700), Surgical Instrument Cleaner (3-720), Surgical Instrument Stain Remover (3-740), Instrument Care DVD (3-810), Nylon & Stainless Steel Brushes

MILTEX® Instrument Care Training

25-minute Instructional DVD assists practitioners and staff to properly care for instruments and to keep them in top working condition. DVD offers step-by-step guidance on handling, cleaning, rinsing, inspecting, lubricating and sterilizing surgical instruments.

Step-by-step poster provides easy instructions to clean and prepare instruments for sterilization.

Try a variety of our popular cleaning products with a H.I.P. sample box.

Sharpening Stones

MILTEX® sharpening stones and honing oil provide clinicians with the proper tools for re-establishing an instrument's proper cutting edge. The sharpening stones are available in the most popular types and shapes: Arkansas No. 4 fine flat stone, Arkansas fine conical stone, India No. 1 fine flat stone, India No. 6 medium wedge, India No. 309 fine stone and a variety of Thompson™ Precision™ synthetic stones.

MILTEX® honing oil should be used in conjunction with the Arkansas and India stones. The honing oil helps facilitate movement across the stone, reducing friction and the problem of metallic particles embedding into the stone surface. The Thompson™ Precision™ synthetic stones do not require any lubrication. All stones should be sterilized after use.

Instrument Storage System & Latex-Free Silicone Mats

Miltex® Instrument Storage System featuring The "Tuck-Away™" Lid

1. Unique flow-through design.
2. Medical grade silicone provides instrument retention when lid is closed.
3. Full length hinge provides stable and secure attachment to cassette.
4. Quick and easy push button release provides a positive lock when closed.
5. Pre-stamped tabs allow for custom coding of cassettes.
6. Double-hinged lid folds under for easy storage during use.
7. Self-lubricating plastic hinge pin will not corrode and provides smooth mechanical movement.
8. Passivated Stainless Steel provides corrosion protection and an aesthetic finish.

THOMPSON™ Cassettes

Thompson™ cassettes are manufactured with passivated stainless steel, feature the Thompson Tuck-Away lid* and are available in a variety of sizes and configurations to meet all storage needs.

Thompson™ cassettes are available in several options:

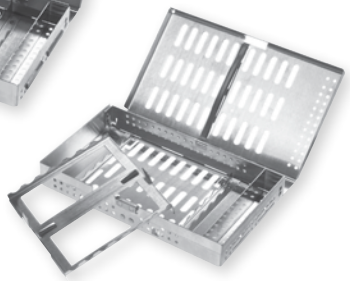
Single Rack Cassettes — Cassette contains a single riveted rack to accommodate various hand instruments. Several sizes are available and hold 5 to 26 instruments.

Double Rack Cassettes — Cassette contains additional removable rack for double stacking instruments.

Utility Cassettes — Cassette does not contain an instrument rack, making it ideal for ring-handled and larger sized instrumentation.

* Thompson 5 cassette features single-hinged lid.

Single Rack cassette



Double Rack cassette

Utility cassette

Thompson™ 5 Cassette

The Thompson™ 5 Cassette is perfect for simple procedures requiring few instruments. Its compact size features a single hinged lid, and it can hold up to 10 hand instruments with the double rack.

		Dimensions

STDBOM	Medium Surgical Cassette	10″ x 5-1/2″ x 4″	254 x 140 x102

Large Surgical Cassette

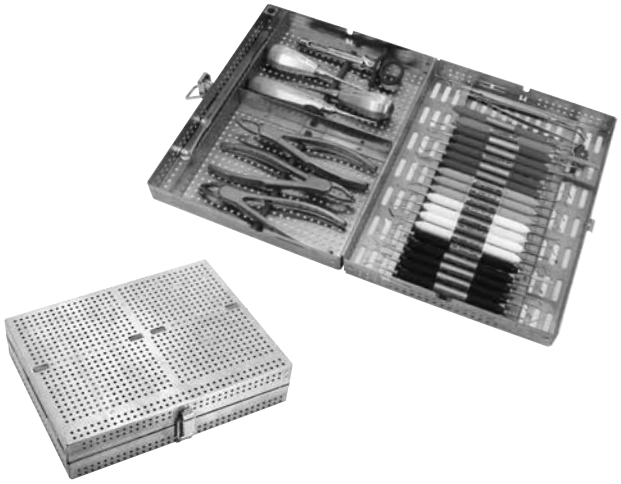
Our largest surgical cassette has a maximum depth of two inches. The Large Surgical cassette features two breakaway lids and the two compartments are hinged together for ease of processing and storing various sized instruments.

		Dimensions	
REF	**Description**	**Inches**	**Millimeters**
STDBOL	Large Surgical Cassette	11″ x 8″ x 4″	279 x 203 x 102

Twenty-Two Instrument Cassette

This 22 instrument cassette is ideal for storing large quantities of hand instruments and additional larger instruments.

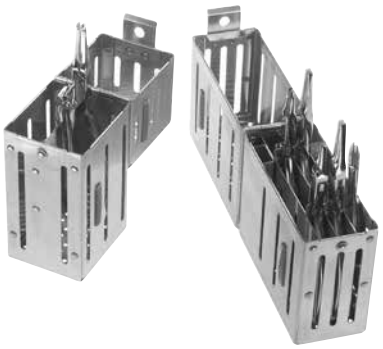
		Dimensions	
REF	**Description**	**Inches**	**Millimeters**
STD222	22 Instrument Cassette	8″ x10-7/8″ x1-3/16″	204 x 276.5 x 30



Orthodontic Cassette

The upright box design of the Thompson™ Orthodontic Cassettes is perfect for storing orthodontic pliers, wire cutters, scissors and wire bending instruments.

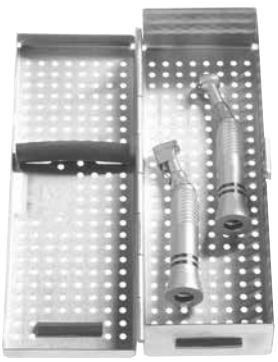
		Dimensions	
REF	**Description**	**Inches**	**Millimeters**
STDORTHO	Ortho Cassette	5″ x 7″ x 2″	127 x 178 x 51
STDORTHOS	Small Ortho Cassette	6-1/2″ x 2-1/4″ x 2″	165 x 57 x 51



Handpiece/Accessory Cassette

This cassette is excellent for small specialized setups, handpieces and smaller handled instruments.

		Dimensions	
REF	**Description**	**Inches**	**Millimeters**
3-080205	Handpiece/ Accessory Cassette	8″ x 2-3/16″ x 1-7/16″	204 x 71 x 37



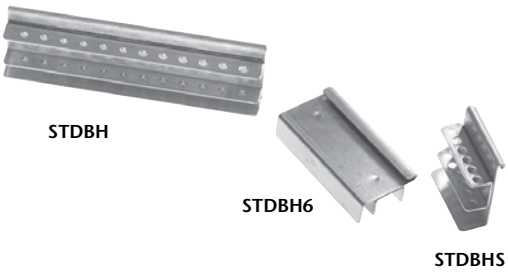
Cassette Accessories

These accessories can be used as stand-alone items or in conjunction with the Thompson™ cassettes.

Bur Holders

A bur holder can be added to hold both short and long shank burs and diamonds.

REF	Description
STDBH	12 hole bur holder
STDBH6	6 hole bur holder
STDBHS	6 hole surgical bur holder



Small Parts Box

Holds small items such as ortho brackets, long shank or lab carbide burs and rubber dam clamps. Features a hinged lid.

		Dimensions	
REF	Description	Inches	Millimeters
STDPB	Small Parts Box	1-2/3" x1-1/3" x1"	42 x 33 x 26

Endodontic Stands

Available in 60 and 72 hole configurations, the endodontic stand is ideal for storing all styles of hand files and rotary nickel titanium files. Can be used in conjunction with all standard Thompson™ cassettes.

REF	Description
STDES60	Endo Stand, 60 hole
STDES72	Endo Stand, 72 hole

Sterilizing Tray

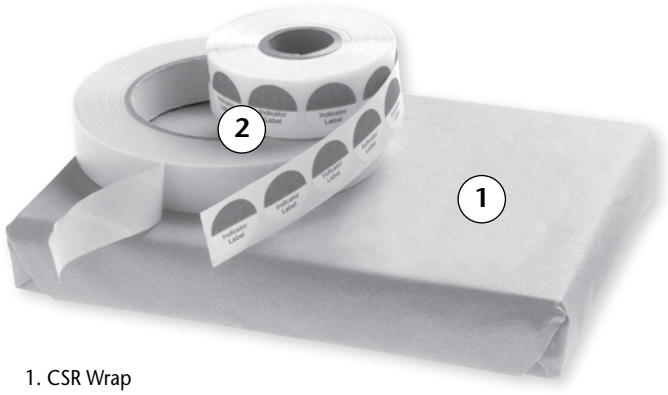
Sterilization Products

CSR Wrap

A suitable CSR wrap for steam, ETO gas and radiation sterilization processes. CSR wraps are electronically inspected for defects such as pin holes and are monitored for thickness consistency. CSR wraps are one of the lowest linting products available on the market.

Features include:
- Resists memory
- Allows steam penetration faster than muslin
- Repels water and operating room fluids
- Low linting
- Meets established standards for tensile strength and tear resistance
- Excellent barrier to airborne bacteria
- Accepts sterilization tape and labels
- Biodegradable

REF	Dimensions	Case quantity
STD1515	15″ x 15″	1000/case
STD2020	20″ x 20″	500/case
STD2424	24″ x 24″	500/case



1. CSR Wrap
2. Indicator Tapes

Indicator Tapes

Indicator tapes are used to visually identify processed from unprocessed packs of instruments. MILTEX® Indicator tapes are manufactured from a specially treated crêpe paper and are coated with a high performance, pressure-sensitive adhesive that will not come undone when subjected to wet or dry heat.

Features include:
- Adheres to any kind of material
- Distinctive color-change
- Accommodates pack expansion during sterilization
- Accepts labels and writing

REF	Description
STDSTEAM	3/4″ Steam, 60 yd.
STDCHEM	1/2″ Chemical Vapor, 60 yd.
STDDRY	1″ Dry Heat, 60 yd.

Steam Indicator Strips

Per CDC guidelines, a chemical indicator should be used with each load in conjunction with routine spore testing. The MILTEX® Steam Indicator Strip turns brown when sterilization conditions have been met and is certified for use with all steam sterilization processes. Steam Indicator strips may be maintained as a permanent record of sterilization

REF	Description
STDIND	Steam Indicator Strips, 250/bx

MILTEX® Storage Container System

Miltex has solicited the help and experience of our Customers, Surgical Distributor Partners and the finest European Manufacturers to design and construct the very best Sterilization Container available today.

We have included all of the necessary features while streamlining the selection to offer not only the best Container but one that is economical and well suited for your facility budget, instrument sterilization and storage requirements.

- Lid and bottom of container are both one-piece construction and have a uniform, anodized aluminum alloy finish
- Containers are lightweight yet durable enough to accommodate acceptable weight loads of surgical instrumentation
- Handles stop at 90° to aid lifting; low profile latch allows simple and secure lid closing
- Retention plate employs an easy "click and lock" closure over disposable, quick-to-change filter
- Dual silicone gaskets within retention plate and around perimeter ensure complete container and filter seal
- Baskets are constructed with solid wire mesh to allow for maximum ultrasonic cleaning; handles can be positioned to assist with secure and comfortable grasp for removal under sterile conditions

Conversion Charts

French measurement refers to a unit of distance used for measuring the diameters of small tubes such as catheters, sounds, bougies, suction tubes and uterine dilators. One French is equal to 1/3 millimeter (about 13.123 mils).

Autoclaving

Instruments are normally autoclaved with saturated steam at 134° Celsius, although a temperature of 121° Celsius may be used in conjunction with a longer exposure time on instruments with limited thermostability.

The sterilization procedure used on your instruments must be in compliance with sterilization standards and must be appropriate for the instruments to be sterilized. The packing materials used in the sterilization procedure must also be suitable for the procedure selected and must comply with all relevant quality sterilization standards.

Dental instruments can be treated similarly to surgical instruments in the sterilization process.

Steam Autoclave Guide

Temperature	121-134° C
Pressure	30 PSI
Cycle Time	Approximately 30 minutes; must maintain noted temperature & pressure level for 15 minutes
Sterilant	Steam
Sterilization Range	Stainless steel, glassware, Selected rigid materials

Be sure to refer to your autoclave manual or autoclave manufacturer for proper usage instructions.

Dental Hand Instrument Sharpening Instructions

How to sharpen instruments?

The sharpening stone moves while the instrument is held stationary.

1. Place 1 drop of Miltex® Honing Oil on the Arkansas or India sharpening stone. No lubrication is required on ceramic stones. (Apply oil only if it was not previously applied to stone or if more lubrication is needed).
2. Hold the instrument in one hand while applying the stone to the lateral surface of the point of the instrument, forming a 110° angle with the face of the blade of the instrument.
3. Position the sharpening stone to contact the heel of the instrument blade and work toward the tip, keeping the stone in contact with the blade throughout the sharpening procedure
4. Move the sharpening stone up and down along the instrument with short strokes, placing more pressure on the down stroke. (Continue to keep the instrument still).
5. Finish sharpening the instrument with a down stroke, which prevents a rough edge from forming on the instrument.

a) Metal particles and lubricant will accumulate on the blade and can be wiped off with sterile gauze. (This accumulation is also an indication that the proper angulation was maintained during the sharpening process).

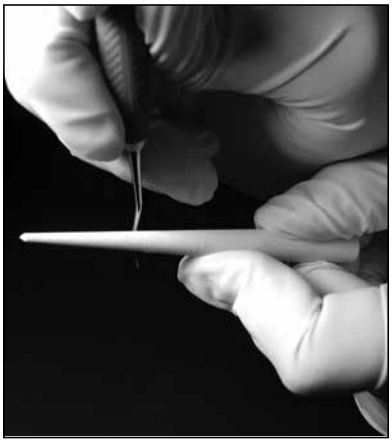
6. For sickle scalers, continue sharpening to the point of the scaler. For curettes, continue around the toe to maintain its curved shape.
7. Test for sharpness with a plastic Miltex® test stick. If the blade of the instrument is sharp, it will grab into the stick. If the blade is dull, it will slide over the stick without grabbing. If the blade of the instrument is still dull after sharpening, re-evaluate the angle of the stone and repeat the sharpening procedure (steps 2-6).
8. Repeat the procedure to sharpen the other side of sickle scalers and universal curettes.

STEP 1

STEPS 2 & 4

STEP 7

Dental Hand Instrument Sharpening Instructions



ROUNDING THE TOE
CURVED SICKLE

ROUNDING THE TOE
STRAIGHT SICKLE

Rounding the toe of curettes

1. Place 1 drop of Miltex® Honing Oil on the Arkansas or India sharpening stone. No lubrication is required on ceramic stones. (Apply oil only if it was not previously applied to stone or if more lubrication is needed).
2. Place the sharpening stone at a 45° angle to the face of the instrument.
3. Using downward strokes, rotate the sharpening stone around the toe of the instrument.

Sharpening the face of dental instruments

Sharpening the face of periodontal instruments is only recommended for removing a roughened edge. Extraneous grinding of the face can weaken the instrument blade.

For curettes and curved sickles, use a conical or cylindrical sharpening stone (Arkansas Conical, part number: STN-ARK-CON or India No. 309 part number: STN-IND-CON-309)

1. Place 1 drop of Miltex® Honing Oil on the Arkansas or India sharpening stone. No lubrication is required on ceramic stones.

   (Apply oil only if it was not previously applied to stone or if more lubrication is needed).
2. Place the stone at the junction between the face of the instrument and the shank of the instrument.
3. Roll the sharpening stone across the face of the instrument, moving toward the toe of the instrument.
4. Use as few strokes as possible and light, even pressure.

For straight sickle instruments, use a flat sharpening stone (Arkansas No. 4 flat, part number: STN-ARK-FLT-4 or India No.1, part number STN-IND-FLT-1).

1. Place 1 drop of Miltex® Honing Oil on the Arkansas or India sharpening stone. No lubrication is required on ceramic stones.

   (Apply oil only if it was not previously applied to stone or if more lubrication is needed).
2. Place the stone on the entire facial surface of the instrument.
3. Move the stone across the facial surface of the instrument in a back and forth motion.
4. Use as few strokes as possible and light, even pressure.

INSTRUMENT WARRANTY

Miltex® and Padgett® Instruments are guaranteed to be free from material defects. Our Guarantee also includes a commitment to the very highest standards of quality craftsmanship which will be employed in the manufacture of each and every Instrument. If either of these high standards are not met by Miltex, our customer may return the Instrument to be repaired or replaced at our discretion and at no charge to the customer.

PRODUCT WARRANTY

Miltex also offers to our customers an array of complementary surgical and dental products. These are held to the same high standards of material and workmanship as our instruments. However, all of these quality products are also provided with a limited one-year warranty.

- Chiropractic and Auto-Surgical Mallets
- Laparoscopic Instruments and Scopes
- Instrument Containers and Cassettes
- Chrome Instruments
- Electrosurgical Instrumentation
- Electrical Devices
- Podiatry Nipper/Splitter Springs
- Fiber Optic Instruments / Accessories

REPAIR WARRANTY

If for any reason a customer is dissatisfied with a Miltex® repair, we guarantee to replace or again repair the product at no charge if the instrument is returned within 30 days. We request that our customers assist us in protecting our employees by returning cleaned and sterilized instruments for repair.

WARRANTY STIPULATIONS

Our Warranty is effective from the date-of-purchase only from either Miltex or an Authorized Miltex Distributor. The warranty remains in effect if the Instrument or Product is used for its intended surgical or dental purpose as well as continuous and proper care of the Instrument or Product is maintained.

OTHER WARRANTY INFORMATION FOR OUR CUSTOMERS

- We ask our customers to use only the Miltex® Repair Services for our products so the warranty remains in effect.
- We love to meet your unique or special needs with custom produced products. However, these are not returnable.
- Miltex offers excellent Care and Cleaning products for our instruments. Please use these products or other appropriate cleaning products to properly maintain your instrument as a valuable asset. Proper care and cleaning of your instruments is also a requirement to maintain the instrument warranty.
- We strongly recommend that you use the appropriate instrument for the identified clinical need. Misuse of instruments can cause damage to the instrument or product and will void the warranty.
- Hurricanes, fires or other disasters will void the warranty of your instruments.

A FINAL & REQUISITE STATEMENT

As set forth in these Terms, Conditions, Policy and Warranty, Miltex makes no other representations, either expressed or implied, which supersede the above descriptions. In no event will Miltex be liable for any incident, special or exemplary damages or loss of profits in connection with the use of a Miltex® Instrument or Product.

TERMS & CONDITIONS

ORDERS AND QUOTATIONS

Contact Miltex, Inc., 589 Davies Drive, York, PA 17402 or call toll free 1-866-854-8300 to place orders and for formal quotations. Orders may also be placed via toll-free fax 1-866-854-8400, on our web site at www.miltex.com (registered authorized distributors only) or through Electronic Data Interchange (EDI).

TERMS

All invoices are payable net 30 days from date of invoice.

FREIGHT

Prices quoted are FOB factory. Prices are subject to change without notice.
Orders will be shipped via the carrier of Miltex's choice unless the distributor requests a particular service. If a special request is made, an additional handling charge will be included on the invoice to cover the resulting processing and carrier charges.

ACCEPTANCE

All orders are subject to approval by Miltex.
Miltex herewith reserves the right to alter the design or form of any product or to discontinue any product prior to the date of delivery without incurring any obligation to make such changes in any items previously purchased, whether or not delivered.

CREDIT

Miltex reserves the right to refuse orders, suspend credit and cancel unfulfilled orders when credit conditions of a customer warrant such action.

SHIPMENTS, DAMAGES, & SHORTAGES IN TRANSIT

Shipment schedules are approximate and are as accurate as conditions permit on the date the schedules are provided. Miltex assumes no responsibility or liability for unforeseen delays in making delivery. When signing for receipt of goods, all visible damage and/or shortages to cartons must be indicated on the carrier delivery receipt so that a claim may be filed with the carrier. The customer shall inspect all items upon arrival and give written notice to Miltex of any claim for a shortage or non-conformance within 7 days after receipt of shipment.
Miltex may make partial shipments, which the distributor shall accept and pay for at the prices specified on maturity of the invoice involved.

RETURN MATERIALS POLICY

A Returned Materials Authorization number (RMA) must be obtained prior to returning product to Miltex. Product returned without an RMA number will be returned directly to the distributor, at our cost, with a letter of explanation. Returns can only be granted and authorized by obtaining an RMA number from Miltex customer service at toll free 1-866-854-8300.
Issue of an RMA number should not be interpreted as a final credit to your customer account. Miltex reserves the right to evaluate incoming returns prior to issuing any customer credit.
There will be a 15% restocking charge for product returned after 60 days but before 120 days after receipt of shipment. Product must be returned unused in its original packaging. No returns will be accepted after 120 days after receipt of shipment. Non-returnable products received by Miltex will be returned directly to the distributor, at our cost, with a letter of explanation.
Sterile products which have been opened, returned out of the original package or returned after the sterile expiration date are not returnable.
Discontinued products, medicament products, private labeled, custom made, custom etched or neutralized products are not returnable.
Broken instruments noted as 'Sharps' have special handling and return requirements. Call customer service toll free 1-866-854-8300 for information regarding special shipping and handling requirements.

INSTRUMENT SERVICE, REPAIR AND RETURN INSTRUCTIONS

Miltex, Inc. offers you the expertise and convenience of operating its own in-house Service and Repair Department. Please follow our simple return instructions to ensure all returns and repairs are processed correctly and in a timely manner. Your instruments are as important to us as they are to you.

Please contact our Customer Service Department at 1.866.854.8300 or repairs@miltex.com to obtain a Return Material Authorization (RMA) number. The RMA number is required before instruments are returned for repair.

Be prepared to provide the following information:
- Customer account number
- Customer purchase order number

IMPORTANT: Any instrument sent to Miltex, Inc. without an RMA number will be returned to sender without being evaluated or repaired.

Once you have received your RMA number, repairs should be sent to:

Miltex, Inc.
Repair Department
589 Davies Drive
York, PA 17402 USA
RMA #: _____ (needed on outside of shipping box)

How to Package and Ship Instruments:
- Miltex, Inc. cannot accept instruments that have not been properly cleaned and sterilized.
- Include the RMA number, customer account number, customer purchase order number and reason for repair.
- Include all contact information (name, address, phone number, email address).
- Wrap instruments to protect them during transit.
- Use a common carrier (FedEx, UPS).
- Insure the package, and keep a record of the tracking number.

NOTE: We cannot accept instruments for repair at conventions or trade shows. Miltex, Inc. representatives cannot accept instruments for repair. Please follow the instructions above.

If you have questions or comments, contact Customer Service at 1.866.854.8300 or repairs@miltex.com.
